

Shaakichiuwaanaan Project

Corporate Presentation

October 2025

P M E T
R E S O U R C E S

NORTH AMERICA'S
CRITICAL-MINERAL POWERHOUSE

IMPORTANT INFORMATION

This presentation is dated October [20], 2025, and has been prepared by PMET Resources Inc (**Company**) and is authorised for release by Managing Director, Ken Brinsden.

THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE FEASIBILITY STUDY (FS) was first released by the Company in its news release dated October [20], 2025, titled "PMET Resources Delivers Positive CV5 Lithium-Only Feasibility Study". The Company confirms that all material assumptions underpinning the production target and forecast financial information derived from the production target in the FS news release continue to apply and have not materially changed.

THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE PRELIMINARY ECONOMIC ASSESSEMENT (PEA) was first released by the Company in its news release dated August 21, 2024, titled "PEA Highlights Shaakichiwaanaan Project as a Potential North American Lithium Raw Materials Supply Base". The PEA is no longer current for Canadian securities law purposes. The basis for the PEA and the qualifications and assumptions made in connection with the PEA were disclosed in such technical report filed by the Company in September 2024, which has been superseded by the August 2025 MRE-based Technical Report.

IMPORTANT INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE CV5 PEGMATITE MINERAL RESERVE ESTIMATE was reported by the Company in accordance with ASX Listing Rule 5.9 on October [20], 2025. The Company confirms it is not aware of any new information or data that materially affects the information included in the announcement and that all material assumptions and technical parameters underpinning the estimate in the announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcement.

IMPORTANT INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE CONSOLIDATED MINERAL RESOURCE ESTIMATE was reported by the Company in accordance with ASX Listing Rule 5.8 on July 21, 2025. The Company confirms it is not aware of any new information or data that materially affects the information included in the announcements and that all material assumptions and technical parameters underpinning the estimates in the announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcements.

CURRENCY: Unless otherwise indicated all references to \$ or CA\$ in this release are to Canadian dollars. A foreign exchange rate of US\$ of 0.76US\$/CA\$ has been used over the life of mine.

DISCLAIMER AND FORWARD-LOOKING STATEMENTS

This presentation contains "forward-looking information" or "forward-looking statements" within the meaning of applicable securities laws.

All statements, other than statements of present or historical facts, are forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and assumptions and accordingly, actual results could differ materially from those expressed or implied in such statements. You are hence cautioned not to place undue reliance on forward-looking statements. Forward-looking statements are typically identified by words such as "plan", "development", "growth", "continued", "intentions", "expectations", "strategy", "opportunities", "anticipated", "trends", "potential", "outlook", "ability", "additional", "on track", "prospects", "viability", "estimated", "reaches", "enhancing", "strengthen", "target", "will", "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements in this presentation include, but are not limited to, statements concerning: the results of the FS, including, without limitation, project economics, financial and operational parameters such as expected throughput, production, processing methods, cash costs, all-in sustaining costs, other costs, capital expenditures, free cash flow, NPV, IRR, payback period and life of mine, upside potential, opportunities for growth and expected next steps in the development of the project, including the timing of the FID and commissioning and future work and optimization, the economic potential of the Shaakichiwaanaan Project, including its potential resilience to lower market cycle and additional mineral production, including tantalum and caesium, the upcoming ESIA process, including the proposed permitting and development timeline, the opportunities for additional conversion at CV5 and CV13, the anticipated production rate, the potential for the Shaakichiwaanaan Project to become a cornerstone supplier to North American, European, and/or North Asian battery supply chains, the eligibility to tax credits and other governmental support programs, and the release of the FS,

Although the Company believes its expectations are based upon reasonable assumptions and has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Key assumptions upon which the Company's forward-looking information is based include without limitation, assumptions regarding development and exploration activities; the timing, extent, duration and economic viability of such operations, including any mineral resources or reserves identified thereby; the ability to achieve production and the timing thereof; the accuracy and reliability of estimates, projections, forecasts, studies and assessments; the Company's ability to meet or achieve estimates, projections and forecasts; the availability and cost of inputs; the price and market for outputs; foreign exchange rates; taxation levels; the timely receipt of necessary approvals or permits; the ability to meet current and future obligations; the ability to obtain timely financing on reasonable terms when required; the current and future social, economic and political conditions; and other assumptions and factors generally associated with the mining industry. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which may have been used.

IMPORTANT INFORMATION

Forward-looking statements are also subject to risks and uncertainties facing the Company's business, any of which could have a material adverse effect on the Company's business, financial condition, results of operations and growth prospects. Some of the risks the Company faces and the uncertainties that could cause actual results to differ materially from those expressed in the forward-looking statements include, among others, requirements for additional capital, operating and technical difficulties in connection with mineral exploration and development activities; actual results of exploration activities, including on the Shaakichiuwaanaan Project ; the estimation or realization of mineral reserves and mineral resources; the timing and results of estimated future production; the costs of production, capital expenditures, the costs and timing of the development of new deposits, requirements for additional capital; future prices of spodumene; changes in general economic conditions; changes in the financial markets and in the demand and market price for commodities; lack of investor interest in future financings; the Company's ability to secure permits or financing for the completion of construction activities; and the Company's ability to execute on plans relating to the Shaakichiuwaanaan Project. In addition, readers should review the detailed risk discussion in the Company's most recent Annual Information Form filed on SEDAR+ and with the ASX for a fuller understanding of the risks and uncertainties that affect the Company's business and operations. These risks are not exhaustive; however, they should be considered carefully. If any of these risks or uncertainties materialize, actual results may vary materially from those anticipated in the forward-looking statements found herein.

Forward-looking statements contained herein are presented for the purpose of assisting investors in understanding the Company's business plans, financial performance and condition and may not be appropriate for other purposes.

The forward-looking statements contained herein are made only as of the date hereof. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except to the extent required by applicable law. The Company qualifies all of its forward-looking statements by these cautionary statements.

NON-IFRS AND OTHER FINANCIAL MEASURES

This presentation includes non-IFRS financial measures and non-IFRS financial ratios. The Company believes that these measures provide additional insight, but these measures are not standardized financial measures prescribed under IFRS and therefore should not be confused with, or used as an alternative for, performance measures calculated according to IFRS. Furthermore, these measures should not be compared with similarly titled measures provided or used by other issuers.

The non-IFRS financial measures and non-IFRS financial ratios used in this presentation and common to the mining industry are defined below:

- **Cash operating costs at site and cash operating costs at site per tonne:** Cash operating costs at site is a non-IFRS financial measure which includes mining, processing, and site administration. Cash operating costs at site per tonne is a non-IFRS financial ratio which is calculated as cash operating costs at site divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- **Total cash operating costs (DAP Grande-Anse as POL) and total cash operating costs per tonne (DAP Grande-Anse as POL):** Total cash operating costs (DAP Grande-Anse as POL) is a non-IFRS financial measure which includes mining, processing, site administration, and product transportation to Grande-Anse. Total cash operating costs (DAP Grande-Anse as POL) per tonne is a non-IFRS financial ratio which is calculated as total cash operating costs (DAP Grande-Anse as POL) divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- **All-in sustaining cost (AISC) and AISC per tonne:** All-in sustaining cost is a non-IFRS financial measure which includes mining, processing, site administration, and product transportation to Grande-Anse and sustaining capital. All-in sustaining cost per tonne of spodumene concentrate is a non-IFRS financial ratio which is calculated as all-in sustaining cost divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- **EBITDA:** EBITDA is a non-IFRS financial measure which is comprised of net income or loss from operations before income taxes, finance expense – net, depreciation and amortization. These measures are used by the Company to show anticipated operating performance, by eliminating the impact of non-operational or non-cash items.

The Company does not currently have operations and therefore does not have historical equivalent measures to compare and cannot therefore reconcile with historical measures.

QUALIFIED PERSONS (QP) / COMPETENT PERSONS (CP)

Mr. Darren L. Smith, M.Sc., P.Geo., who is a Qualified Person as defined by National Instrument 43-101, and Competent Person as defined by the JORC Code 2012, and member in good standing with the Ordre des Géologues du Québec (Geologist Permit number 1968), and with the Association of Professional Engineers and Geoscientists of Alberta (member number 87868), has reviewed and approved, or has prepared, as applicable, the disclosure of the scientific and technical information contained in this presentation and has confirmed that the relevant information is an accurate representation of the available data and studies for the Shaakichiuwaanaan Project.

Mr. Smith is the Executive and Vice President of Exploration for PMET Resources Inc. and holds common shares, Restricted Share Units (RSUs), and Performance Share Units (PSUs) in the Company.

Mr. Frédéric Mercier-Langevin, Ing. M.Sc, who is a Qualified Person as defined by National Instrument 43-101, and Competent Person as defined by the JORC Code 2012, and member in good standing of Ordre des Ingénieurs du Québec (OIQ), has reviewed and approved, or has prepared, as applicable, the disclosure of the scientific and technical information contained in this presentation and has confirmed that the relevant information is an accurate representation of the available data and studies for the Shaakichiuwaanaan Project.

Mr. Mercier-Langevin is the Chief Operating and Development Officer for PMET Resources Inc. and holds common shares and stock options in the Company.

North America's Premier Critical Minerals Asset

SHAAKICHIUWAANAAN – LITHIUM, CAESIUM, AND TANTALUM FOR GLOBAL SUPPLY CHAINS

A globally significant critical minerals project located in the Eeyou Istchee (James Bay) region of Quebec - Canada

Targeting lithium, caesium, and tantalum supply into the North American, European, and Asian Supply Chains

INVESTMENT HIGHLIGHTS

- **A multi commodity, long life Project** endowed with **lithium** and other key critical minerals - including **caesium** and **tantalum**.
- **Largest undeveloped hard rock lithium pegmatite Mineral Resource in the Americas¹**, positioning to become the **4th largest lithium spodumene producer globally** with up to ~800 ktpa of SC 5.5².
- **Maiden lithium Mineral Reserve defined^{1,3} – poised for delivery into burgeoning market:**
 - **84.3 Mt at 1.26% Li₂O, Probable, underpinning a nominal 20-year life-of-mine (LOM).**
 - Significant exploration upside to increase Mineral Resources and Reserves, with the potential to expand production capacity and/or LOM over time.
- **World's largest known pollucite-hosted caesium pegmatite Mineral Resource¹** – a rare and valuable critical mineral with emerging market applications.
- **One of the largest known tantalum pegmatite Mineral Resources globally¹** – another key critical mineral, potentially adding to the economic resilience of the Project.
- **Volkswagen Group a strategic partner** ~C\$69M⁴ strategic investment for 9.9% equity and offtake for 12.5% of SC5.5 production over 10 years.
- **Actively progressing** offtake and strategic partnership/funding opportunities in the supply chain.

Our Development Strategy

Optimize and Deliver on our Lithium Operation

Up to ~800 ktpa SC5.5¹

A staged development for a lithium only open pit and underground mining operation, at the CV5 Spodumene Pegmatite.

- ✓ Simple geology, mining, and pegmatite geometry. Very high-grade subsets of the Mineral Reserve^{2,3}.
- ✓ Conventional DMS-only processing flowsheet
- ✓ Proximal to already-built, high quality power and transportation infrastructure

Unlock Value from Other Critical Minerals

Caesium and Tantalum Co-Products

- ✓ Extract greater value by expanding production into other critical minerals over time, including caesium and tantalum.
- ✓ World's largest known pollucite-hosted caesium pegmatite resource⁴ uniquely positioned to supply emerging markets and applications.
- ✓ One of the largest known tantalum pegmatite resources globally⁴, and in a favourable mining jurisdiction.

Diversify Downstream

Lithium Chemicals

Future midstream and downstream opportunities to capture additional value along the chemical supply chain.

- ✓ Opportunity to provide a lithium enriched intermediary product or purified chemicals into the burgeoning North American, Asian and European battery industry
- ✓ Potential to establish midstream and downstream processing expertise through strategic partnerships, including the potential for electric calcination
- ✓ Opportunity to develop a downstream lithium chemicals supply hub supporting western supply growth

To become a globally significant supplier of strategic critical minerals

Target - Top 5 producer Globally

Targeting ~ 800 ktpa and positioning to become the **4th largest spodumene producer of SC5.5 globally¹** and largest in the Americas.

Uniquely positioned to facilitate **North American, European, and Asian supply chains for 20+ years** with a coarse, high-quality SC5.5% spodumene concentrate.

Source: Company disclosure. 1. Refer to Appendix for supporting information. Notes: Production figures have been adjusted on a 5.5% Li₂O equivalent basis. Greenbushes and Pilgangoora production capacity excludes expansions pending FID (i.e. Chemical Grade Plant 4 & P2000, respectively). Capacity refers to current installed production capacity, and where not available, average annual production.

Project and Feasibility Study Summary

Project Description

Shaakichiuwaanaan Project – production rate of up to ~800,000 tpa of spodumene concentrate at CV5 spanning ~20 years¹ at a competitive AISC of ~US\$597/t².

- Project located in the Eeyou Istchee James Bay region of Québec, benefitting from **existing all-season major road and power infrastructure**.
- FS is a key requirement of the ESIA** which defines the entire scope for approvals sought and **will kick-start the final mine authorization process**.
- Maiden Reserve³** of 84.3 Mt at 1.26% Li₂O Probable (2.62 Mt LCE) at CV5.
 - Opportunities remain for additional conversion at CV5 and CV13, which together host a Mineral Resource⁴ – inclusive of Reserves – of 108.0 Mt at 1.40% Li₂O Indicated and 33.4 Mt of 1.33% Li₂O Inferred.
- Mining operations include both low strip ratio open pit and higher-grade underground mining.
- Spodumene concentrate is produced through the processing of **CV5-only** lithium ore through a **DMS-only** plant with nominal capacity of up to 5.1 Mtpa.
- Multiple pathways for further Project optimization including construction optimisation, co-product development and mine sequencing, undertaken during the circa. 2-year approval process.

1. See Feasibility news release dated October 20, 2025. 2. All-in sustaining costs ("AISC") includes mining, processing, site administration, product transportation costs to Grande-Anse (Saguenay), and sustaining capital over the LOM per unit of concentrate produced during the LOM. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 3. Project hosts a Probable Mineral Reserve of 84.3 Mt at 1.26% Li₂O (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li₂O (open-pit) and 0.70% Li₂O (underground). Underground development and open pit marginal tonnage containing material above 0.37% Li₂O are also included in the statement. Effective Date of September 11, 2025. 4. Refer to Appendix for supporting information. Mineral Resources are inclusive of Mineral Reserves.

Purpose of the Feasibility Study

Pathway to Final Permitting & Production

- A critical path item which defines the full scope of the Project for ESIA applications. It is a key requirement for commencing the final mine authorisation process which is estimated to take 18-24 months.
- A **lithium-only (CV5) FS** enables the quickest pathway for permitting and maintains our development timeline, targeting FID by end of 2027 and commissioning in late 2029.

To Authorise a Full-Scale Project, Not FID

- FS defines entire Project scope and environmental footprint (up to 5.1 Mtpa processing capacity for up to ~ 800 ktpa SC) for the purpose of ESIA approvals.
- **It is not for a Final Investment Decision.** FID will be undertaken when detailed engineering & Project optimisation are completed, customer alignment is ensured, and when the market supports the Project's development (target FID by the end of 2027).

Optionality & Flexibility

- FS/ESIA approvals cover a broad scope of **up to 5.1 Mtpa (800 ktpa SC5.5) in processing capacity**, with the **single authorisation** process allowing for either a staged or full-scale development —maximising flexibility.
- A **staged development is possible within approved environmental limits**: hybrid mine plan (Stage 1 open pit + Stage 2 underground) enables a **scalable and incremental expansion** with favourable pricing and market conditions.
- FS publication and framework supports **strategic partner, customer and supply-chain engagement**.

4.7 Years

Notes: See Feasibility news release dated October 20, 2025, for further details. 1. Spodumene price assumption based on recent market indicators and technical reports. Price forecasts are typically presented on a 6% Li₂O spodumene basis, but for the purpose of this FS the Company's pricing assumption has been calibrated to SC5.5 with adjustment for lithium content on a pro rata basis (equivalent to US\$1,332 SC6). 2. Project Net Capex includes Capex of C\$1,784M, plus contingency of \$194M less estimated CMT-ITC tax credits of \$323M, less estimated TCRR of \$43M and includes pre-production credits of C\$102M. 3. Total cash operating cost (FOB Grande-Anse) includes mining, processing, site administration, and product transportation to Grande-Anse. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 4. All-in sustaining costs ("AISC") includes mining, processing, site administration, product transportation costs to Grande-Anse and sustaining capital over the LOM per unit of concentrate produced during the LOM. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information.

PEA – Feasibility Variance

CAPEX – Full-Project Comparison

The net CAPEX after anticipated tax credits and recognition of pre-commercial production revenues totals \$1,510M vs \$1,157M in the PEA for a net increase of ~30%.

Further capital expenditure optimisation is expected through the detailed engineering phase, leading into a future FID event.

This increase is attributable to the following key factors:

- **Power Supply:** Expanded electrical infrastructure, with an upgrade from 69 kV to 120 kV capacity, supporting higher underground power demand (including electric mobile equipment).
- **Mining Equipment Ownership:** The feasibility excludes any financing scenarios and as such it assumes ownership of the mining fleet rather than a lease arrangement.
- **Level of Study & Inflationary Pressure:**
 - The Feasibility Study reflects a more advanced engineering definition, resulting in additional work packages and contingency requirements typical of a feasibility-level assessment.
 - Costs reflect updated 2025 pricing relative to 2023 assumptions used in the PEA incorporating labour, supplier and materials cost escalation.

PEA – Feasibility Variance

CAPEX - Stage 1 Comparison

The net CAPEX after tax credits totals \$1,008M versus \$749M in the PEA, representing an approximate 35% increase inclusive of additional scope items constructed up-front for the entire project development in this feasibility scope.

This increase reflects several key factors:

- **Electrical Infrastructure Upgrade:** The FS Stage 1 investment includes the construction of a significantly higher capacity powerline and power distribution infrastructure than was envisaged at PEA (from 69 kV to 120 kV), future-proofing the site for the electrified underground fleet and stage 2 production capacity.
- **Mining Equipment Ownership:** The FS assumes ownership of the mining fleet rather than a lease arrangement, increasing upfront capital.
- **Level of Study & Inflationary Pressure:**
 - The Feasibility Study includes a more detailed engineering basis than the prior PEA, capturing additional work packages and detailed costing typical of this level of assessment, which is partially offset by higher federal and provincial tax credits.
 - Costs reflect updated 2025 pricing relative to 2023 assumptions used in the PEA, incorporating labour, supplier and materials cost escalation.

Stage 1 Capex - PEA vs FS (MCA\$)

PEA – Feasibility Variance

Production Cost

- The all-in sustaining cost¹ is largely consistent with the prior PEA result.
- With an **AISC¹ of US\$597/t**, the Shaakichiuwaanaan Project remains at approximately the median in the global spodumene concentrate cost curve⁴.

Production Costs per Concentrate Tonne	CA\$/t	US\$/t
Mining	320.1	238.9
Processing	91.2	68.0
Site Administration	100.7	75.1
Cash Operating Cost at Site ²	511.9	382.0
Transportation cost	217.2	162.1
Total Cash Operating Cost ³ (DAP Grande-Anse as POL)	729.1	544.1
Sustaining Capital	70.7	52.7
All-In Sustaining Cost ¹ – (DAP Grande-Anse as POL)	799.8	596.8

1. All-in sustaining costs ("AISC") includes mining, processing, site administration, and product transportation costs to Grande-Anse and sustaining capital over the LOM per unit of concentrate produced during the LOM. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures. 2. Cash operating cost at site includes mining, processing, and site administration, it is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 3. Total cash operating cost (DAP Grande-Anse as POL) includes mining, processing, site administration, and product transportation to Grande-Anse. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures. 4. Benchmark Minerals Global Spodumene concentrate cost-curve, Q3 2025.

Sensitivity Analysis

The Project is most sensitive to revenue factors, including:

- lithium grade (%Li₂O),
- spodumene concentrate price, and
- exchange rate outcomes.

Sensitivity Analysis

NPV_{8%} sensitivity to spodumene concentrate price (US\$/t SC5.5, real)

- The FS estimates positive EBITDA¹ of CA\$127M at US\$700/t (SC 5.5), approximating PMET price received at current spot price of \$US830 (SC6, CIF China basis).

- The lithium-only Project remains accretive below spodumene price of US\$1,221/t.

Average life of mine EBITDA sensitivity to spodumene concentrate price (US\$/t SC5.5, real)

1. EBITDA is a non-IFRS financial measure which is comprised of net income or loss from operations before income taxes, finance expense – net, depreciation and amortization. Refer to “Non-IFRS and other financial measures” in the Important Information section for more information.

Opportunities / Next Steps

Opportunities – General

While awaiting the final mine and environmental approval, the Company expects to further optimize the Project via various initiatives

The Company will start detailed engineering work, with a view to further optimize the Project schedule and economic outcomes to inform an FID which remains targeted for 2027.

Main Optimization Opportunities:

- Project schedule optimization
- Modularization of construction
- **Realize tantalum co-product benefits**
- **Further de-risk CV5 underground execution via a bulk sample program**
- **Fully realize the potential of the high-grade Nova Zone**
- **CV13 and caesium co-product benefits**
- Increase Mineral Resource and Reserves
- Valorizing lithium in DMS tailings

Opportunities – Nova Zone

Providing access to the potential of higher-grade process plant feed and lower operating costs earlier in the production cycle could improve Project economics

- The high-grade core of the underground – Nova Zone – remains an outstanding and unique opportunity, **containing 12.1 Mt at 2.0% Li₂O on a fully diluted basis, factoring in mining recovery¹**.
- Accelerating development into the zone has the potential to meaningfully improve Project economics.

Description	Color
1.65 to 1.95	Green
1.95 to 2.25	Yellow
2.25 to 2.55	Orange
2.55 to 2.85	Red
2.85 to 3.15	Purple
3.15 +	Pink

General View of Underground Nova Zone – Looking SSE
All stopes above 1,65% Li₂O (fully diluted)

33,786	2.87
19,902	2.84
37,944	2.84
16,931	2.83

1. Is included within the Project's a Probable Mineral Reserve of 84.3 Mt at 1.26% Li₂O (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li₂O (open-pit) and 0.70% Li₂O (underground). Underground development and open pit marginal tonnage containing material above 0.37% Li₂O are also included in the statement. Effective Date of September 11, 2025.

Opportunities – Tantalum Co-Product

A “bolt-on” tantalum recovery circuit has the potential to generate additional revenue with expected modest upfront CapEx investment

Early-stage analysis results of bench-scale testwork on CV5 Pegmatite’s dense media separation (“DMS”) waste stream fractions has been promising².

Using these preliminary results and designing minor diversions to some of the process streams (i.e., “bolt-on circuits”), could facilitate tantalite recovery in the following areas:

- DMS sinks magnetic and DMS middling streams, and
- DMS bypass stream (requires installation of the Phase 2 pastefill preparation plant for grinding).
- Although conceptual in nature, the flowsheet is expected to be relatively cost effective to the overall Project.
- Analysis of these first results show opportunities to improve both the grade and the recovery of the tantalum circuit. Further testwork is being planned to realize these gains.

Very coarse-grained tantalite crystals proximal to large spodumene crystal at ~217 m depth in drill hole CV23-109 at the CV5 Pegmatite. Core grades 1,688 ppm Ta₂O₅ over 0.5 m (216.5 m to 217.0 m)¹

Concentrate from Mozley table testwork from CV5 drill core composite MC001²

Opportunities – CV13 and Caesium Co-Product

Plan view of the Vega and Rigel caesium zones based on a 0.5% Cs₂O grade constraint within the wider CV13 Pegmatite body. Refer to news release dated July 20, 2025 “World’s Largest Pollucite-Hosted Caesium Pegmatite Mineral Resource Defined at Shaakichiwaanaan”

Potential LOM extension (lithium and tantalum) from future development of CV13 with highly valuable pollucite (caesium) component

CV13 contains some of the highest lithium and tantalum grades on the Property

Conceptual Mining Constraint	Pegmatite	Classification	Tonnes (t)	Li ₂ O (%)	Cs ₂ O (%)	Ta ₂ O ₅ (ppm)	Ga (ppm)	Contained LCE (Mt)
Open-Pit	CV13	Indicated	5,996,000	1.89	0.60	201	76	0.28

Total			19,482,000	1.41	0.30	161	69	0.68

Concurrent to high-grade lithium and tantalum are the Rigel and Vega zones, which host high-grade caesium in the mineral pollucite.

Caesium Zone	Classification	Tonnes (t)	Cs ₂ O (%)	Li ₂ O (%)	Ta ₂ O ₅ (ppm)	Contained Cs ₂ O (t)
Rigel	Indicated	163,000	10.25	1.78	646	16,708
	Inferred	-	-	-	-	-
Vega	Indicated	530,000	2.61	2.23	172	13,833
	Inferred	1,698,000	2.40	1.81	245	40,752
Rigel + Vega	Indicated	693,000	4.40	2.12	283	30,541
	Inferred	1,698,000	2.40	1.81	245	40,752

Note: Shaakichiwaanaan’s Consolidated MRE (CV5 + CV13 pegmatites), which includes the Rigel and Vega caesium zones, totals 108.0 Mt at 1.40% Li₂O, 0.11% Cs₂O, 166 ppm Ta₂O₅, and 66 ppm Ga, Indicated, and 33.4 Mt at 1.33% Li₂O, 0.21% Cs₂O, 155 ppm Ta₂O₅, and 65 ppm Ga, Inferred, and is reported at a cut-off grade of 0.40% Li₂O (open-pit), 0.60% Li₂O (underground CV5), and 0.70% Li₂O (underground CV13). A grade constraint of 0.50% Cs₂O was used to model the Rigel and Vega caesium zones. The Effective Date is June 20, 2025 (through drill hole CV24-787). Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. The Mineral Resources are inclusive of Mineral Reserves.

Opportunities – Bulk Sample

Accessing the underground mineralized zone, including targeting high-grade lithium-caesium-tantalum intercepts within the high-grade Nova Zone, to improve geological understanding.

- Authorisation process recently launched for the development of a 2,300 m underground ramp and ancillary infrastructure to a depth of 215 m from surface
- Targeting mineralized zones in two locations of interest – 125 m depth (Upper Bulk Sample) and 215 m depth (Lower Bulk Sample) representative of a wide range of grades for lithium, caesium, and tantalum.

The program is expected to generate approximately 50,000 tonnes of mineralized material:

- Validate the characteristics and continuity of the CV5 Deposit by acquiring representative, mine-scale samples and information;
- Validate extraction method assumptions and evaluate ground response to development and mining technique;
- Confirm feasibility of chosen processing method and associated recovery assumptions;
- Validate characteristics of the product concentrate(s) and tailings generated.

Subject to the approvals timeline, work could begin in summer of 2026.

Opportunities

Leveraging available offtake and critical minerals co-products

LITHIUM

- Up to ~700 ktpa of SC5.5 spodumene concentrate production capacity remains uncommitted and available for future offtake with funding support.
- **Scale and longevity** combined with **strong government incentives** provides the opportunity to build a consortium of strategic partners to help fund and support the Project which can underwrite a new Western facing supply chain.
- **Engage with credible supply chain partners** with strong ESG credentials who can provide financial, marketing and/or technical support for both mine development and future expansions.
- With an opportunity to integrate also into higher value lithium chemicals both **midstream and downstream** utilising Quebec's renewable power for **electric calcination to reduce carbon intensity and transportation costs**.

CAESIUM – industry engagement underway

- **A rare and valuable commodity** which can potentially diversify and enhance the Company's revenues.
- **World's largest known pollucite-hosted caesium pegmatite** Mineral Resource¹ has potential to create an **expanded western supply chain** which can support existing and emerging applications.

TANTALUM – industry engagement underway

- One of the world's largest known tantalum pegmatite Mineral Resources¹, and at relatively high-grade.

Achievements

- ✓ **Robust, lithium-only Feasibility Study¹ completed** on the CV5 Pegmatite supporting a nominal **20-year LOM**
- ✓ **84.3 Mt at 1.26% Li₂O Probable Mineral Reserve²**
- ✓ **108.0 Mt @ 1.40% Li₂O Indicated and 33.4 Mt @ 1.33% Li₂O Inferred³** – largest lithium pegmatite Mineral Resource in the Americas
- ✓ Discovery of high-grade Nova (CV5), Vega (CV13), and caesium zones
- ✓ Strong ongoing engagement with Cree First Nations
- ✓ Strong ongoing engagement with strategic partners including **VW and PowerCo, as a 9.9% shareholder and offtaker**

Next Steps

- Lodge ESIA progressing Provincial and Federal permitting approvals for a full scale 5.1 Mtpa operation
- Project optimisation initiatives - including detailed engineering with optimised development scenarios, studies for inclusion of Tantalum and Caesium as co-products & underground bulk sample
- Continue industry engagement for additional offtake and assess strategic opportunities for funding and downstream growth
- Continue Cree and broader community engagement and progress Impact Benefits Agreement (IBA) discussions

1. See Feasibility news release dated October 20, 2025. 2. Project hosts a Probable Mineral Reserve of 84.3 Mt at 1.26% Li₂O (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li₂O (open-pit) and 0.70% Li₂O (underground). Underground development and open pit marginal tonnage containing material above 0.37% Li₂O are also included in the statement. Effective Date of September 11, 2025. 3. Refer to Appendix for supporting information. Mineral Resources are inclusive of Mineral Reserves.

Environment and Community Relations

Continuous Stakeholder Engagement

Cree Nation of Chisasibi – Primary Community

- In person events / visits: every 6 weeks
 - Meetings & presentation: tallyman family, leadership and general community members.
 - Interviews with various organisations
 - Mine site visits for key Chisasibi stakeholders
 - Special events: Truth & Reconciliation Ceremony at Shaakichiuwaanaan
 - Participation in community events
- Office in Chisasibi Commercial Center
 - Community Liaison Coordinator
 - Accounting Technician

Engagement with various stakeholders

- Cree Nation Government, Cree Nation of Mistissini, Cree Nation of Wemindji
- Private lease owner
- Eeyou Itschee James Bay Regional Government and local municipalities (Radisson, Matagami)
- Quebec Government: Société Plan Nord, MRNF, MELCCFP, MEIE, Hydro-Québec, SDBJ
- Canada: Canada Impact Assessment Agency, Fisheries and Oceans Canada, Transport Canada, Environment Canada

All Stakeholders # of engagements (2025)

105

All Stakeholders # of engagements (Since 2022)

387

First Nation People on the Project

Committed to creating local employment and business opportunities

Economic Opportunities

- **33% spend** on average for January-September 2025 period in Indigenous companies or JVs
- Primary companies & JVs:
 - Muskw

 - Petronor
 - Niigaan
 - Air Inuit
 - Mirage Outfitters (Cree Health Board)

Market Update

Lower Battery Costs = Higher Battery Demand = Higher Lithium Demand

A lowering battery cell costs entices adoption, which increases lithium demand

Batteries Are Now Cheaper Than They've Ever Been Before

Global Weighted Avg. Cell Price (\$/kWh)

Battery demand is up 28% YTD

Regional battery demand by market, Jan – Jul

Lithium demand to increase by 25%

Global lithium demand, 2024 vs 2025

Source: Benchmark Minerals/Rho Motion research team, August-October 2025

Battery Demand Remains Very Robust

EV sales: up 26% as of September year to date (YTD), with September being **an all-time record** month at 2.1M vehicles. Sales growth in line with 2024 YTD at 26% growth. Full year expectations¹:

BESS project pipeline for 2025 currently at 333 GWh, slightly ahead of expectations for the full year (FY) expectations²:

EV sales outlook by vehicle class, 2022 - 2025

BESS installed capacity outlook by storage type, new additions

Growth Surprises?

EV Bus & Truck sales, by region 2024-2026F

Half of China's heavy truck sales could be EVs by 2028, CATL says

By Colleen Howe

May 18, 2025 1:20 AM EDT · Updated May 18, 2025

- Buses and trucks could surprise the demand numbers.
 - Global medium and heavy-duty EV truck sales are **up 140% YoY** as of September 2025; China market share for EV trucks will be **14%** this year¹.
- **Battery sizes are 4-20x larger than EVs²:**
 - Buses/coaches: 200-500 KWh.
 - Medium duty: 200-500 KWh.
 - Heavy duty: 200-1,000 KWh.

Source: 1. Bloomberg NEF, September 2025. 2. Rho Motion, "Bus & Truck Appendix" Q3 2025

A lot more BESS needed to achieve Net Zero Emission

	2024	2030	Growth CAGR
Rho Motion (base)	214	850	26%
Rho Motion (upside)	214	1100	31%
CATL (IPO Prospectus)	214	1100	31%
IEA (NZE Scenario)	214	1200	33%
Citi Research (Sept 2025)	214	1500	38%

The IEA believes the world needs 1.2 TWh of BESS in 2030 for Net Zero Emission (NZE) targets of Paris Accord¹.

80% of renewables growth is solar until 2030².

- Solar power can be optimized with BESS pairing.

Longer duration = increased BESS GWh demand.

- Average duration going from **2.2** hours in 2024 to **2.6** hours in 2030³.

Long Term Lithium Demand/Supply Gap

In the lithium demand upside case, the market is expected to be balanced soon (2027), with deficits to become embedded shortly after.

Average supply-demand balance, base case¹:

- Deficits from approximately 2033 onwards.
- 2030-2035: **91Kt LCE/yr avg surplus.**
- 2036-2040: **-420Kt LCE/yr avg deficit.**

Average supply-demand balance, upside case¹:

- 2030-2035: **-367Kt LCE/yr avg deficit.**
- 2036-2040: **-1Mt LCE/yr avg deficit.**

Source: 1. Benchmark Q3 Forecast, 2025

Supplemental Slides

Project Summary – Development Strategy

Feasibility considers two sequential phases to achieve design production capacity of up to ~800,000 tpa of spodumene concentrate

- Phase 1 delivers the first 400,000 tpa of concentrate (SC5.5) production capacity via open pit mine & first train of process plant to underpin ~2.5 Mtpa processing capacity
 - from early engineering and procurement (pre-FID) to commercial production is ~3.4 years
 - from commencement of construction on site (breaking ground) to concentrate production is ~2 years
- Phase 2 delivers additional capacity of ~400,000 tpa concentrate (SC5.5) via underground mine & second train of process plant to underpin an additional ~2.5 Mtpa processing capacity and is complete ~22 months after commercial production for Phase 1 is achieved.

Site Overview

Mining Methods

Combination of open pit and underground mining to supply ore feed to the process plant

- The open pit supplies initial ore feed to the process plant for commissioning and ramp up to the point of commercial production, and 90% of the ore feed in the first 12 months of production following commercial production.
- The open pit commences 3 months prior to the start of mining for the underground.
- **Open pit mining commences ~ 2 years prior to commercial production**, with initial mining areas targeted for construction material, and early ore supply.

Annual Processed Tonnes by Ore Source

Over the life of mine, the **proportion of total concentrate produced from the open pit operation versus the underground operation is 50:50**, with each operation in essence supporting ~ 400,000 tpa concentrate production (SC5.5)

Mining Methods

- Open pit
 - Ore mined and processed: 49.2 Mt at 1.12% Li_2O
 - Strip Ratio: 3.4
- Underground ore mined and processed
 - Ore mined and processed: 35.1 Mt at 1.45% Li_2O
 - 98 km of development

Underground Mine Longitudinal View by Mining Method – Looking 289° W

Underground Mine with Open Pit – Plan View

Mining Method – Open Pit

The mining of the Shaakichiuwaanaan open pit is planned in two main phases, West and then East

Focusing on the West Area of the open pit allows for more rapid ore production while delaying, as much as possible, impacts (dewatering) on Lake 001

West Pit Sequence

- Initial water diversion dike and water diversion channel construction, allowing western extremity of Lake 001 to be fished out and dewatered
- West Pit is mined in three sub-phases, producing ore from 2028 to 2037

East Pit Sequence

- Final water diversion dikes construction, allowing second phase of Lake 001 fishout and dewatering to proceed
- East Pit is mined in three sub-phases, producing ore from 2032 to 2047

Up to 4 phases are being mined simultaneously to maintain ore feed requirements

West Pit and
dewatered section of
Lake 001

Final Pit (East and
West) and dewatered
section of Lake 001

Mining Method – Open Pit

Conventional mining method and equipment

Final Pit Outline and Phases

Operations Model

- Owner-operated (except for overburden removal)

Main Equipment Fleet

- Drilling:
 - 3 x 4,5"-8" Production drills
 - 1 x Preshear drill
- Loading:
 - 2 x 15m³ diesel-electric shovels
 - 2 x 22.9m³ diesel front-end loaders
- Hauling:
 - Up to 13 x 140t class off-highway mining trucks
 - Uniform fleet for waste and rock

Mining Method – Underground

High grade underground supplies 50% of spodumene concentrate

Longitudinal view of the Underground (looking North) – by mining method

Longitudinal view of the Underground (looking North) – by mining block

Mining Method

- Long Hole Open Stoping with some Longitudinal Retreat
- 1,525 stopes

Mining Sequence

- 11 mining blocks progressing from west to east
- 12 mucking levels (depth of xxx)

Production rate

- 5,000-6,000 tpd of ore
- Average stope size: 21,500 tonnes

An 85 m thick Crown Pillar is maintained

Mining Method – Underground

BEV prime mover fleet reduces ventilation requirements

Operations Model

- Owner-operated (except for first two years of development)

Main Equipment Fleet

- Development:
 - 2 x 2 boom jumbos
 - 6 x bolters
- Stopping:
 - 3 x top hammer drills
 - 1 x ITH drill
 - 1 cablebolter
 - 1 x Raiseboring machine
- Hauling:
 - 9 x 55t BEV trucks
 - 5 x 18t BEV LHD
 - 2 x 10t LHD (diesel)

Process Plant & Metallurgy

- **DMS only process** flowsheet (no flotation)
- **Coarse-grained** spodumene liberates effectively at ~6.5 mm and ~9.5 mm crush sizes
- **Low Fe_2O_3** present, ~0.65% in concentrate: iron is a key impurity to evaluate
- Several tonnes of CV5 drill core metallurgically tested over the period 2022 to 2025.
- Testwork completed on CV5
 - **26 Heavy Liquid Separation and magnetic separation tests** from composites across the CV5 Deposit
 - **5 pilot plant scale DMS tests**
- Feasibility Study LOM **average estimated Li_2O recovery is 68.9%**
- Process plant constructed in two phases

Concentrate Production

Concentrate production commences 2 years after site construction commences, with commercial production achieved 2.5 years after site construction commences.

LOM Production Metrics

Key Metrics	Unit	Value
Phase 1 Project commencement to commercial production (incl. detailed engineering & procurement)	year	3.4
Phase 1 Commencement of construction (breaking ground on site) to commercial production	year	2.5
Underground, Phase 2 Expansion Construction and Ramp Up Phase	year	3.6
Life of Mine (LOM)	year	19
OPEN PIT		
Ore Mined	Mt	49.2
Waste Mined (including pre-stripping)	Mt	167.5
Total Tonnes Mined	Mt	216.7
LOM Open Pit Strip Ratio (waste tonnes: ore tonnes)	w:o	3.4:1
UNDERGROUND		
Ore Mined	Mt	35.1
Waste Mined	Mt	5.2
Total Tonnes Mined	Mt	40.3
PROCESSING		
Total Mineral Reserve (Open Pit + Underground) mined and processed	Mt	84.3
Nominal Process Plant Feed Rate	Mtpa	5.1
Average Process Plant Feed Rate	Mtpa	4.4
Average Li ₂ O recovery	%	68.9
Average Feed Grade	%	1.26
LOM Spodumene Concentrate Produced	Mt	13.3
Spodumene Concentrate Grade	%	5.5
Nominal Spodumene Concentrate Production Rate	ktpa	801.6
LOM Average Spodumene Concentrate Production Rate	ktpa	693.8

Concentrate Transport

Transport route from site to Grande-Anse Marine Terminal, La Baie, (Saguenay) Quebec

- 290 km west bound on the Trans-Taiga Road (all season road)
- 554 km south on the Billy Diamond Highway (all season road)
- Transfer to rail at the existing Matagami Transshipment Center
- 1,075 km rail haul to Grande-Anse Marine Terminal (Saguenay)

Road transport

- 75-ton payload side tipper truck/trailer combination consisting of a four-axle tractor and a five-axle bi-train trailer, equipped with a trailer cover and side-discharge system.
- The truck/trailer combination will need to be approved under an annual special permit due to the allowable Gross Vehicle Weight Rating (GVWR) limit being exceeded

Matagami Transshipment Center

- New spur line will be constructed that will travel through a new pre-fabricated building to facilitate the loading of railcars
- The building will also receive and unload concentrate delivered by road from site.

Port of loading is Grande-Anse Marine Terminal (Saguenay)

- Existing infrastructure
- Rail cars unloaded using straddle excavator
- Up to 15,000 metric tonnes of concentrate will be stored in warehouse
- Warehouse connected to dock area and shiploader by conveyor system

Concentrate Haulage – Truck Route

Key Infrastructure

POWER

- La Grande 4 ("LG-4") hydroelectric dam is located approximately 30 km north-northeast of the Project.
- CV5 is located approximately 13 km south of KM-270 on the Trans-Taiga Road and 14 km south of the powerline corridor, and 50 km southwest of the LG-4 dam complex
- System details:
 - 35MVA peak power draw
 - 54 km 120 kV powerline connection to site
 - 315/120 kV electrical substation (off-site)
 - 13.8 kV site distribution

PASTE BACKFILL PLANT

- Paste backfill plant will produce cemented paste backfill (CPB) for mine backfilling in the underground mine
- Combines a portion of the DMS tailings stream with binder to produce CPB
- Two main components to producing the CPB
 - Paste preparation where DMS tails undergo grinding to meet desired particle size distribution and thickening – ball mill and cyclone circuit, followed by thickener
 - Mixing of thickened DMS tails and binder to produce the CPB – thickened milled DMS tails storage, binder system (2 x 700t silos containing binder, weigh belt and screw conveyor), continuous mixer, paste hopper, and hydraulic piston pump for discharge of CPB

View of Paste Backfill Plant

Key Infrastructure

CAMP

- 672 room permanent workers camp for construction and operational needs.
 - Phase 1, accommodating 480 workers on site
 - Phase 2, accommodating additional 192 workers on site

Typical Camp Dorm Layout

MINING INFRASTRUCTURE

- Underground Portal
- Run-Of-Mine (ROM) pad.
- Underground Ventilation; 1 x fresh air raise, 1 x exhaust raise, 2 x ventilation fans (within enclosed building) and 2 x heating units.
- Compressor building and reticulation of compressed air and water
- Truck Shop (4 x open pit equipment bays, 2 x underground equipment bays, 2 x tracked equipment bays, welding bay, tire shop, battery maintenance, wash bay and dedicated light vehicle work garage)
- Temporary Truck Shop
- Explosives Storage – dedicated explosives magazine and bulk emulsion depot with storage
- Mine Administration Building (consolidating locker rooms, wash areas, ablutions, electrical room, laundry area, and offices)

Typical Deep-Corrugated Galvanized Steel Plates Portal

Key Infrastructure

Overburden, Waste and Tailings Storage Facilities – Plan View (not to scale)

Overburden, Waste Rock and Tailings Storage Facilities

Various stockpiles designed for:

- 155 Mt of waste rock
- 12 Mt overburden
- 54 Mt dry stacked tailings

17 Mt tailings valorised as paste backfill in the underground mine

Stockpile 001 & In-pit waste rock dump

- non-potentially acid-generating/non-metal leaching (Non-PAG/Non-ML) waste rock

Stockpile 002

- potentially acid-generating/metal leaching (PAG/ML) waste rock
- Non-PAG/ML tailings material

Stockpiles 004 & 005

- Overburden

Stockpiles include ditching and basin systems for water management

Project Summary – Ancillary Infrastructure

- First Nation cultural centre.
- Internal site roads
- Fuel Storage and Distribution
- Compressed Natural Gas storage and associated infrastructure for heating for process plant buildings, underground mine and auxiliary buildings
- Warehouse, laboratory, auxiliary buildings for the concentrator and the mine areas
- Fresh / raw water lake intake and water treatment plants.
- Laydown area.
- Water diversion dams and diversion channel for Lake 001.

Note: Mineral resources are presented on a 100% basis and inclusive of reserves where noted. Estimates may have been prepared under different estimation and reporting regimes and may not be directly comparable. PMET Resources accepts no responsibility for the accuracy of peer mineral resource data as presented. Details on the tonnes, category, grade, and cut-off for mineral resources of each company noted herein are found within the respective information sources provided.

Mineral Resource **data sourced through July 11, 2025**, from corporate disclosure of NI 43-101, JORC, or equivalent regulatory body. Deposit/Project data presented includes the total resource tonnage. Mineral resources are presented on a 100% basis and inclusive of reserves where applicable. Data is presented for all pegmatite deposits/projects >10 Mt and >0.65% Li₂O head grade. Shaakichiwaanaan's Consolidated MRE (CV5 + CV13 pegmatites), which includes the Rigel and Vega caesium zones, totals 108.0 Mt at 1.40% Li₂O, 0.11% Cs₂O, 166 ppm Ta₂O₅, and 66 ppm Ga, Indicated, and 33.4 Mt at 1.33% Li₂O, 0.21% Cs₂O, 155 ppm Ta₂O₅, and 65 ppm Ga, Inferred, and is reported at a cut-off grade of 0.40% Li₂O (open-pit), 0.60% Li₂O (underground CV5), and 0.70% Li₂O (underground CV13), with an Effective Date June 20, 2025 (through drill hole CV24-787). Mineral resources are not mineral reserves as they do not have demonstrated economic viability.

For peer Projects, Mineral Reserve **data sourced through July 11, 2025**, from corporate disclosure of NI 43-101, JORC, or equivalent regulatory body. Deposit/Project data presented includes the total reserve tonnage. Data is presented for all pegmatite deposits/projects >10 Mt and >0.65% Li₂O head grade. The Mineral Reserve data for PMET Resources' Shaakichiuwaanaan Project, Effective Date September 11, 2025, is presented herein comparative purposes. The Shaakichiuwaanaan Project hosts a Probable Mineral Reserve of 84.3 Mt at 1.26% Li₂O (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li₂O (open-pit) and 0.70% Li₂O (underground). Underground development and open pit marginal tonnage containing material above 0.37% Li₂O are also included in the statement. Effective Date of September 11, 2025.

Note: Mineral resources are presented on a 100% basis. Estimates may have been prepared under different estimation and reporting regimes and may not be directly comparable. PMET Resources accepts no responsibility for the accuracy of peer mineral resource data as presented. Details on the tonnes, category, grade, and cut-off for mineral resources of each company noted herein are found within the respective information sources provided.

Mineral Resource **data sourced through July 11, 2025**, from corporate disclosure. Deposit/Project data presented includes the total caesium zone resource tonnage. Mineral Resources are presented on a 100% basis. Data is presented for all documented in-situ pollucite-hosted caesium pegmatite deposits/projects to the knowledge of the Company. Mineral Resources for the Rigel and Vega zones (Effective Date of June 20, 2025) are hosted within the CV13 Pegmatite's open-pit conceptual mining shape and modelled based on a 0.50% Cs₂O grade constraint. Mineral resources are not mineral reserves as they do not have demonstrated economic viability.

	Inferred	1,698,000	2.40	1.81	245	40,752

The Consolidated MRE cut-off grade is variable depending on the mining method and pegmatite (0.40% Li₂O open-pit, 0.60% Li₂O underground CV5, and 0.70% Li₂O underground CV13). A grade constraint of 0.50% Cs₂O was used to model the Rigel and Vega caesium zones, which are entirely within the CV13 Pegmatite's open-pit mining shape. The Effective Date of the MREs is June 20, 2025 (through drill hole CV24-787). Mineral Resources are not Mineral or Ore Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.
