Shaakichiuwaanaan Project

Rare Geology of Global Significance

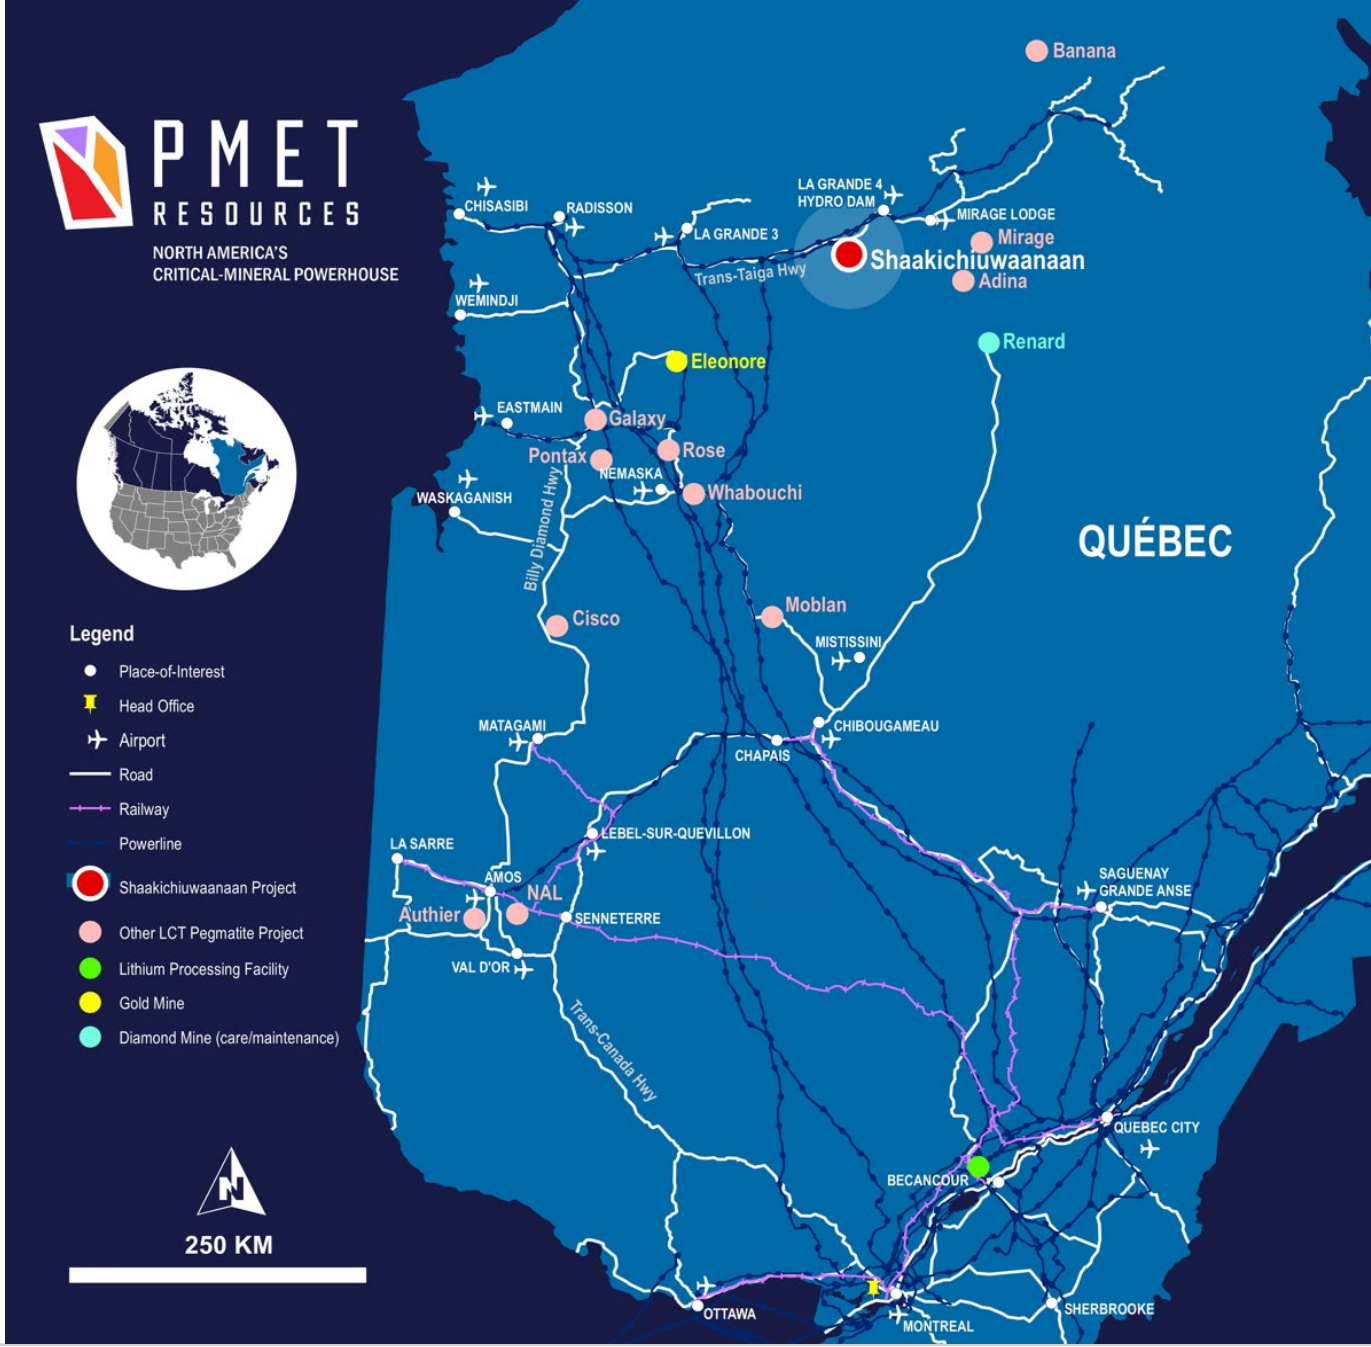

3 critical minerals in a world class mining jurisdiction

Lithium-Caesium-Tantalum (LCT)
each at scale and grade,
recoverable via simple processing techniques

A proven mining jurisdiction with over 20 operating mines

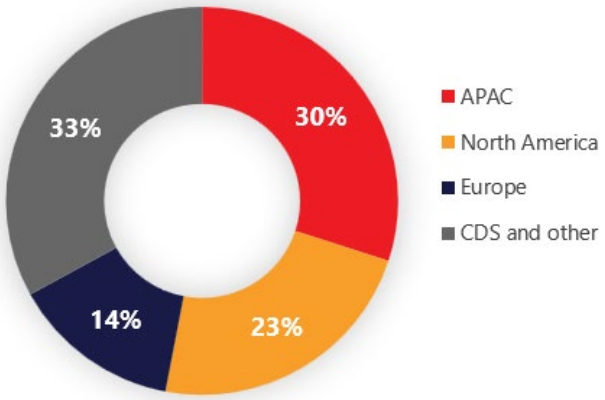

Close to existing infrastructure
hydro power and all-year-round roads connecting to rail network for supply into existing and emerging global supply chains

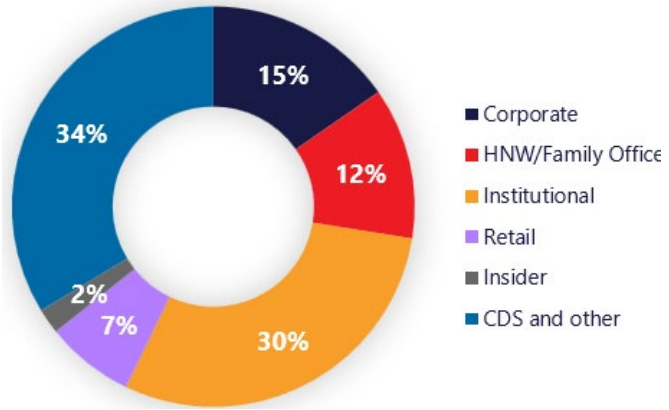

Corporate Structure

Capital Structure	In Millions
Basic Shares Outstanding	185.9
Dilutive Securities	12.4
Fully Diluted Shares	198.3
Market Cap (as November 9th, 2026) :	**CA$622M**
Cash (as of June 30, 2026)	CA$176M

Combined (TSX shares equivalent)	**1.1M**

Leadership that can Finance, Build and Ramp-up a Mine

Built Pilgangoora (PLS) and mines in the north, now developing Shaakichiuwaanaan

Ken Brinsden

CEO, President, Director
B.Eng. (Mining),
MAUSIMM, MAICD

YEARS
Over 30 years

EXPERIENCE
CEO & MD, Pilbara Minerals

ACHIEVEMENTS
Developed Pilbara Minerals (ASX:PLS) from exploration to production, with company growth rising to achieve ASX top 50 companies' status

Natacha Garoute

CFO
CPA, LLB

YEARS
Over 20 years

EXPERIENCE
CFO, Champion Iron Ore
CFO & Corporate Secretary, Roxgold

ACHIEVEMENTS
Extensive experience in Quebec in project finance and capital markets, raised $1B + financing for developers and producers

Frédéric Mercier-Langevin

COO/CDO
Eng., M.Sc

YEARS
Over 20 years

EXPERIENCE
COO, Wesdome Gold Mines, General Mine Manager, Agnico Eagle

ACHIEVEMENTS
Led IBA negotiations with First Nations as COO, ramped up from commissioning to production a 380koz/annum gold mine in Canada's north

Darren L. Smith

Executive Vice President, Exploration
M.Sc., P. Geo

YEARS
Over 20 years

EXPERIENCE
Strong focus on rare earth elements and rare metals (Li, Ta, Nb). Director, VP Exploration, and Sr. Technical Advisor for several junior mineral exploration companies

ACHIEVEMENTS
Instrumental to the discovery of the Ashram (REE-F) and Shaakichiuwaanaan (Li-Cs-Ta-Ga-Rb) deposits; Project development; QP/CP

Alex Eastwood

Executive Vice President, Commercial
BEc, LLB

YEARS
Over 30 years

EXPERIENCE
Chief Commercial & Legal Officer, Pilbara Minerals

ACHIEVEMENTS
Key commercial executive of Pilbara Minerals (ASX:PLS) from exploration to production achieving ASX 50 status

Grace Barrasso

Executive Vice President, Corporate Affairs and ESG
M.Sc

YEARS
Over 25 years

EXPERIENCE
VP – Environment and Sustainability, ArcelorMittal Mining, Alcoa Europe, Xstrata Canada and Mauritania

ACHIEVEMENTS
Lead on ESIA and resettlement projects in W. Africa , former IRMA Board member, Integrating ESG into mining practices (profiled as a 'Quarterly Trailbazer' by YellowYellow

Olivier Caza-Lapointe

Head of Investor Relations

YEARS
Over 15 years

EXPERIENCE
Executive Director — Institutional Sales, CIBC; equity trading, CDPQ

Independent Directors
Pierre Boivin (Chair)
Mélissa Desrochers
Brian Jennings
Aline Côté

Director
Blair Way

Feasibility Highlights

Lower operating costs, enhanced economics[1], and de-risked development scenario compared to prior FS

Shaakichiuwaanaan – a Critical Minerals Powerhouse

Lithium

- Largest lithium pegmatite Mineral Reserve in the Americas[1]
- Up to 800,000 tpa SC5.5 production capacity ➔ globally significant lithium producer[2]

Tantalum

- Maiden tantalum Mineral Reserve declared
- Up to ~635,000 lbs per year of contained tantalum, one of the world's largest non-artisanal source of tantalum[2]

UG-First Development Strategy

Targeting high grade at Nova Zone

- Supporting stronger early production with higher recoveries ~560 ktpa in Year 3: more spodumene concentrate produced from less tonnes mined and processed (2.2 Mtpa)

Reduced execution and seasonality risk

- No expected change to targeted ESIA timeline
- Plant commissioning targeted for 2nd half of 2029

Improved Economics

Key Costs Metrics Improved[3]

- 19% lower Cash Operating Cost of US$433/t[4]
- 18% lower AISC of US$480/t[5]
- Each benefitting from significant tantalum credit of US$108/t

CAPEX Maintained[3]

- Phase 1 Net CAPEX[6] of CA$1,080M similar to prior study
- Optimisation work offsetting inflation and additional tantalum scope

1. See Feasibility news release dated November 10, 2026, for further details. Probable Mineral Reserve of 83.0 Mt at 1.27 Li_2O and 148 ppm Ta_2O_5, at cut-off grade is 0.40% Li_2O (open-pit) and 0.70% Li_2O (underground) with Effective Date of October 19, 2026. 2. If in production today. Refer to Annexures for supporting information. 3. Metrics are compared to previous 2025 Lithium-Only Feasibility Study on CV5. 4. Cash operating cost (FOB Quebec ports) includes mining, processing, site administration, and product transportation costs to a port in Quebec, and tantalum credit, but excludes royalties, over the LOM per unit of concentrate produced. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to the "Non-IFRS and other financial measures" in Important Information for further explanation. 5. AISC means Cash Operating Costs plus sustaining capital over LOM per unit of concentrate produced. It is also a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio 6. Phase 1 Net CAPEX includes CAPEX of CA$1,391M, less estimated Canadian Clean Technology Manufacturing - Investment Tax Credits ("CTM-ITC") tax credits of CA$136M, less estimated Tax Credit Relating to Resources ("TCRR") of CA$45M and includes pre-production credits of CA$131M.

Key Feasibility Outcomes

Key Updated FS Metrics

Higher Phase 1 throughput and significant tantalum co-production, drive lower costs and Project value

Estimated Life of Mine	Nominal Annual Production Capacity	Total Cash Operating Costs	AISC
~20 Years Targeting FID end of 2027 and commissioning from late 2029	**~800 kt SC5.5** **~635,000 lbs Ta_2O_5**	**US$433/t**[3] (FOB Quebec Ports) **(CA$594/t)**[5]	**US$480/t**[4] (FOB Quebec Ports) **(CA$657/t)**[5]

After-Tax NPV 8% Real	After-Tax IRR	Project Net CAPEX[2]	After-tax Payback Period
CA$5.1 Billion (US$3.7 Billion) US$1,788/t (SC5.5 FOB Quebec ports)[1] US$120 per pound of contained Ta_2O_5[1]	**40%**	**CA$1,675 Million** (US$1,223 Million)	**2.7 Years**

Notes: See Feasibility Study news release dated November 10, 2026, for further details. 1. Price assumptions are long-term prices for LOM based on independent market studies from Benchmark Mineral Intelligence (Q3 2026) and OnG Commodities (October 2026) together with analysts forecasts and pricing assumptions disclosed in other project studies. Price forecasts for spodumene are typically presented on a 6% Li_2O spodumene basis, but for the purpose of this Updated FS, the Company's pricing assumption has been adjusted to SC5.5 with adjustment for lithium content on a pro rata basis (equivalent to US$1,950 SC6). 2. Project Net Capex includes Capex of CA$1,862M, plus contingency of CA$201M less estimated CMT-ITC tax credits of CA$213M, less estimated TCRR of CA$45M and includes pre-production credits of CA$131M. 3. Total cash operating cost (FOB Quebec ports) includes mining, processing, site administration, tantalum credit and product transportation to a port in Quebec but excludes royalties, over LOM per unit of concentrate produced. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 4. All-in sustaining costs ("AISC") includes mining, processing, site administration, tantalum credit, product transportation costs to a port in Quebec and sustaining capital over the LOM per unit of concentrate produced but excludes royalties. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 5. A foreign exchange conversion rate of 1.37 CA$/US$ has been used over the life-of-mine ("LOM").

2026 Updated FS: stronger returns at the same lithium price

After-tax NPV_8 increases 44% to CA$2.29B at 2025 FS lithium price and FX assumptions

COMPARISON AT 2025 LITHIUM PRICE AND FX

Key metric	2025 FS	Updated FS[1]	Change
After-tax NPV_8	**CA$1.59B**	**CA$2.29B**	**+44%**
After-tax IRR	18.1%	24.6%	**+6.5 pts**
AISC (FOB Quebec ports)[2]	CA$800/t (US$597/t)	CA$657/t (US$490/t)	**(18%)** **(18%)**
Initial Capital Cost (Phase 1), net of pre-production credits	CA$1.25B	CA$1.26B	**+1%**
Expansion Capital Cost (Phase 2)	CA$628M	CA$672M	**+7%**

CA$699M increase in after-tax NPV_8

CA$180M from study improvements + CA$519M from tantalite[1] concentrate production

2026 FS tantalite concentrate priced at US$120/lb, current spot price US$240/lb[3]

2026 Updated FS Price Case

SC5.5: US$1,788/t
FX: CA$1.37 per US$[1]

CA$5.10B
After-tax NPV_8

40.4%
After-tax IRR

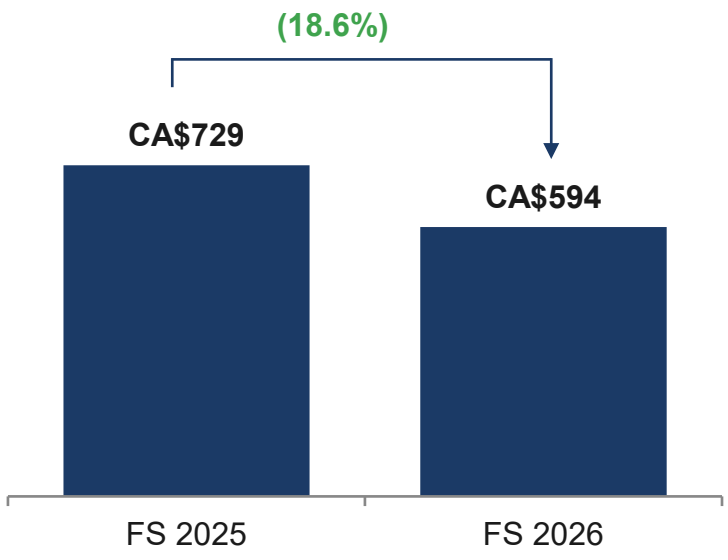

2.7 years
After-tax payback

1. Comparison table uses SC5.5 at US$1,221/t and FX of CA$1.34/US$1 from original 2025 FS. The Updated FS results includes tantalum credit of CA$148/t at an assumed price of US$120/lb contained Ta_2O_5. 2. AISC (FOB Quebec ports) includes mining, processing, site administration, and product transportation costs to a port in Quebec, and tantalum credit and sustaining capital, but excludes royalties, over the LOM per unit of concentrate produced. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to the "Non-IFRS and other financial measures" in Important Information for further explanation. 3. Ta_2O_5 spot price as at November 6, 2026 on Shanghai Metal Markets is USD$240.50/lb (30% contained Ta_2O_5 basis)

Competitive Position on the Lithium Cost Curve

Shaakichiuwaanaan's cash cost improve by 18%, supporting a significant cash margin at various lithium price assumptions

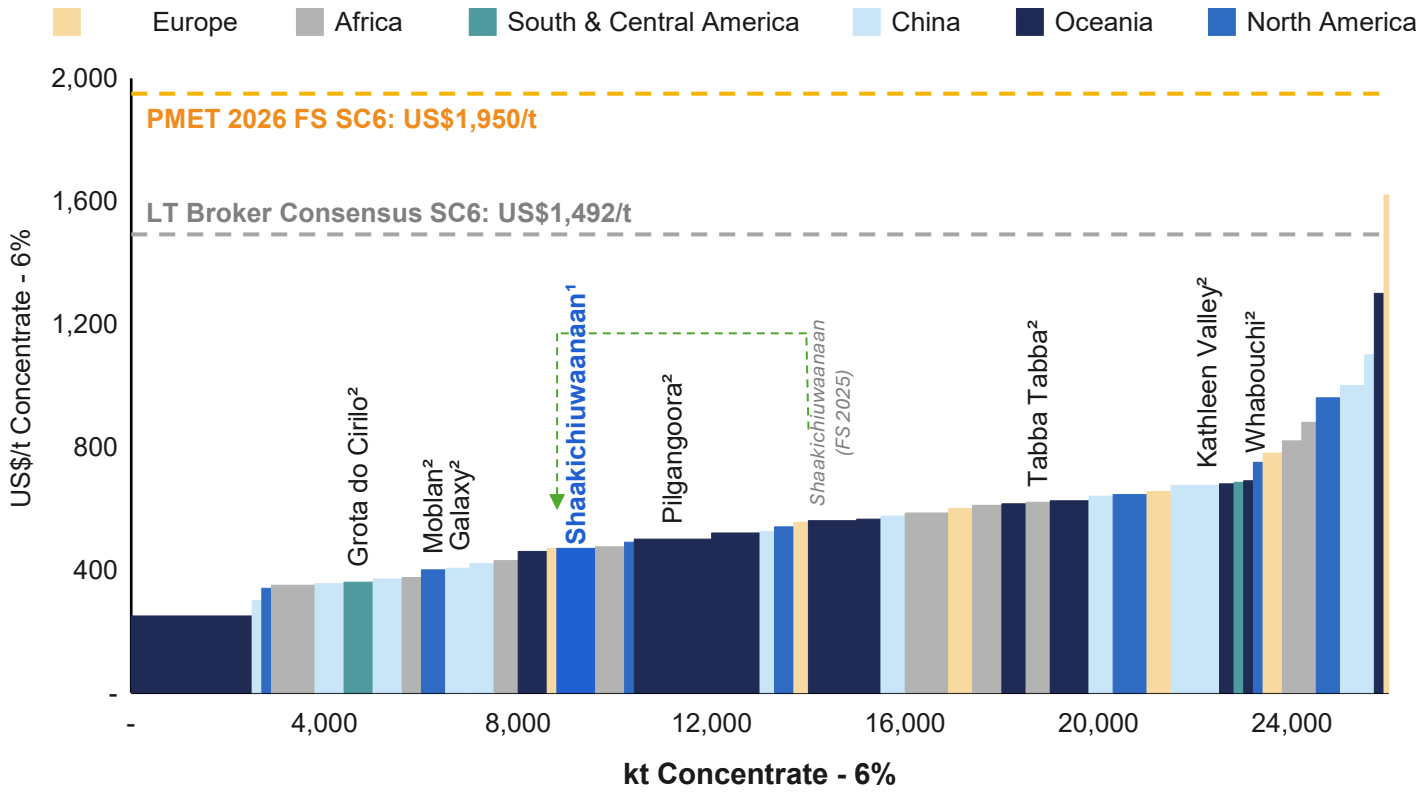

Total Cash Operating Cost (FOB Québec Ports) improvement (CA$/t SC5.5)[3]

Total Cash Operating Cost (US$/t SC5.5)	
US$544	US$433

PMET cash cost includes tantalum credit of CA$148/t (US$108/t, priced at US$120/lb contained tantalite)

Lithium cost curve (based on 2034 C1 cash cost; SC6.0)

Source: Benchmark Lithium Total Cost Model – Q3 2026.
Notes: 1. Based on total cash operating cost (FOB Quebec ports)[3] adjusted to be shown on a SC 6.0 basis. 2. Values reflect the latest available study, adjusted to a common life-of-mine average cash cost (US$/t SC6.0) and production (SC6.0 ktpa).

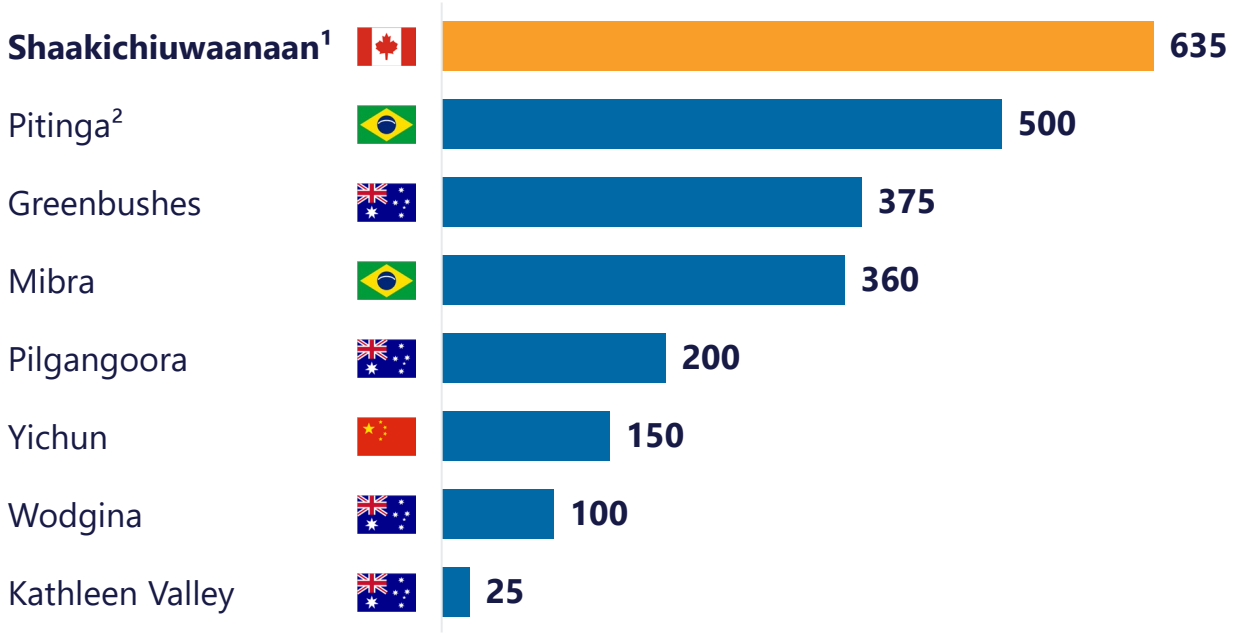

3. Total cash operating cost (FOB Quebec ports) includes mining, processing, site administration, tantalum credit and product transportation to a port in Quebec but excludes royalties, per unit of concentrate produced. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Please refer to "Non-IFRS and other financial measures" in the Important Information section for more information.

Potential to Become one of the World's Largest Non-Artisanal Source of Tantalum

LOM average of 635,000 lbs of Ta_2O_5 per annum[1], establishing a significant new source of traceable, responsibly produced tantalum from Québec, Canada.

Annual Ta_2O_5 production, thousand lbs (non-artisanal sources)

PMET Updated FS (Phase 1+2 average LOM production) output vs 2026 estimated production from existing sources for 2026 (OnG Commodities 2026)

635,000 lb

average LOM production of contained Ta_2O_5 per year on PMET's Updated FS CV5 scenario

~8.6%

of current global mine supply on an equivalent-output basis

~25%

of **non-artisanal** mining if in production today[3]

1. See Feasibility Study news release dated November 10, 2026. 2. Pitinga supplies ferroalloys, compared on contained Ta_2O_5. Source: OnG Commodities, Oct. 2026. 3. Proxy = Australia + Europe + China + part of Ethiopia + PMET (2.55-2.8 Mlb). Global mine supply = OnG 2026f total mines (7,410 thousand lb). Source: OnG Commodities, Oct. 2026.

Mining and Processing

Project Optimisations

Value engineering phase of Updated FS outlined significant value-accretive and derisking opportunities

UG First – Bringing forward the full potential of the Nova Zone

- Underground mined grade averaging **~1.7% Li_2O in Years 1-5**
- Supports stronger earlier production in Phase 1 from a smaller DMS footprint (2.2 Mtpa)
- Derisked execution plan by removing sequential and highly seasonal activities from Phase 1 critical path (dyke and diversion channel construction, fishout, dewatering & lakebed sediment removal)

Tantalum Addition – Meaningful co-product credit to spodumene production

- Study confirms ability to produce a higher-grade secondary tantalite concentrate (20% Ta_2O_5), maximising realised value
- Simple bolt-on, low-cost (CA$25 M), small volume physical processes

Simplified DMS plants flowsheet (now single-stage) delivering **improved recovery** (now ~70% over LOM) and **tighter plant footprint**

- Improved grade-recovery curve through addition of large-scale ApplePick Program
- High Grade Phase 1 catering mostly to the UG ore – Throughput of 2.2 Mtpa
- Low Grade Phase 2 catering mostly to the OP ore – Throughput of 2.9 Mtpa

Mining Parameters

- Refined dilution assumptions aligning with industry standard, improving UG grades.
- Inter-level spacing standardized results in 16% reduction in underground development metres

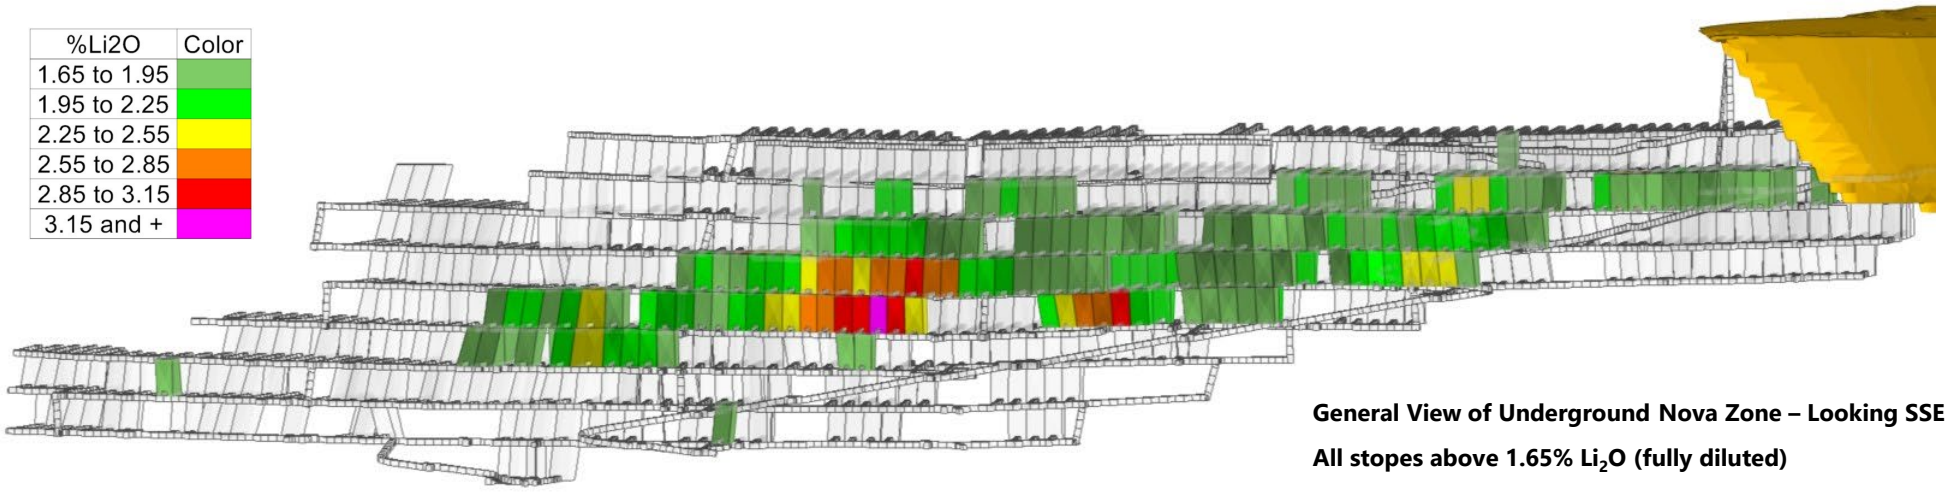

Increased Confidence in Concentrate Transport Assumptions

- Detailed end-to-end transport solution developed via extensive service provider engagement with rigorous cost and logistics analysis

Underground ("UG") First – High-Grade Nova Zone

Providing early access to the high-grade Nova Zone significantly improves Phase 1 economics and derisks Project Execution

- The high-grade core of the Mineral Reserve's underground component – the Nova Zone – includes **12.6 Mt at 2.04% Li_2O on a fully diluted basis**, after mining recovery[1]
- The high-grade nature of the Nova Zone, with a number of stopes grading **>2.5% Li_2O**, is a key Tier-1 differentiator for the Project, facilitating higher-margin tonnes early in the mine-life

General View of Underground Nova Zone – Looking SSE

All stopes above 1.65% Li_2O (fully diluted)

Top 10 Nova Zone Stopes[2]

Tonnes	Grade (%Li_2O)
36,454	3.17
38,587	3.13
30,119	3.04
45,214	2.96
40,121	2.90
50,759	2.90
24,572	2.90
43,570	2.88
40,034	2.75
51,466	2.71

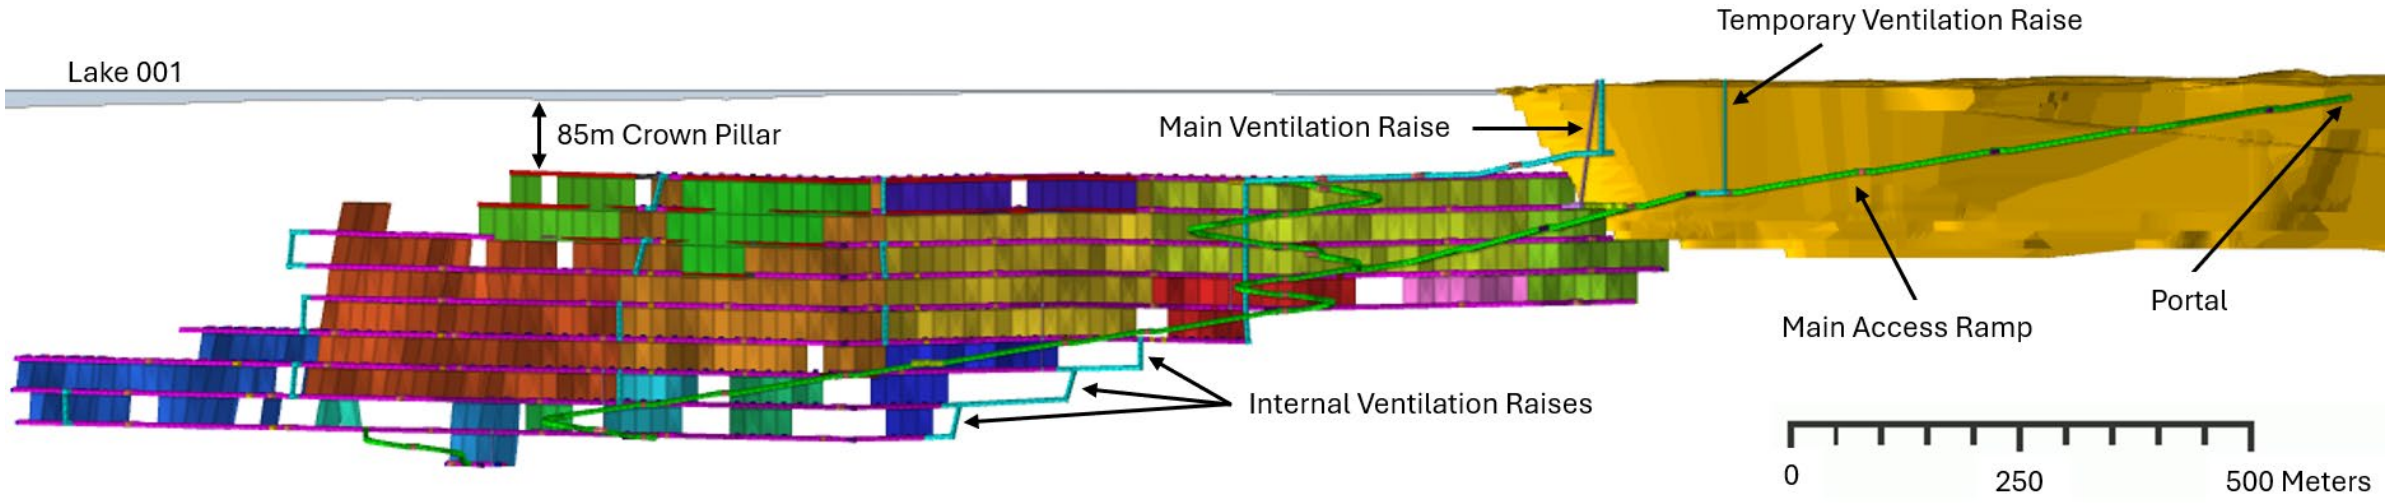

1. Included within the Project's Probable Mineral Reserve of 83.0 Mt at 1.27% Li_2O and 148 ppm Ta_2O_5 (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li_2O (open-pit) and 0.70% Li_2O (underground) with Effective Date of October 19, 2026. 2. Individual stope grades are not representative of the average Mineral Reserve grade.

Mining – UG Optimisations

Careful review of UG mine design highlighted optimisation opportunities

Overall reduction of ~16% in total development metres, achieving reduced lead-time to UG production and thus making UG-first strategy viable

- Main Access Ramp redesign reduced main ramp development (and first access to ore)
- Standardisation of level spacing eliminated two levels, enabling faster ramp-up of UG mining
- Review of stope design and blasting assumptions resulted in reduction in UG dilution assumptions
- UG Mineral Reserve Li_2O grade increased to 1.51%[1] from 1.46% in previous Mineral Reserve[2] further improving UG margins

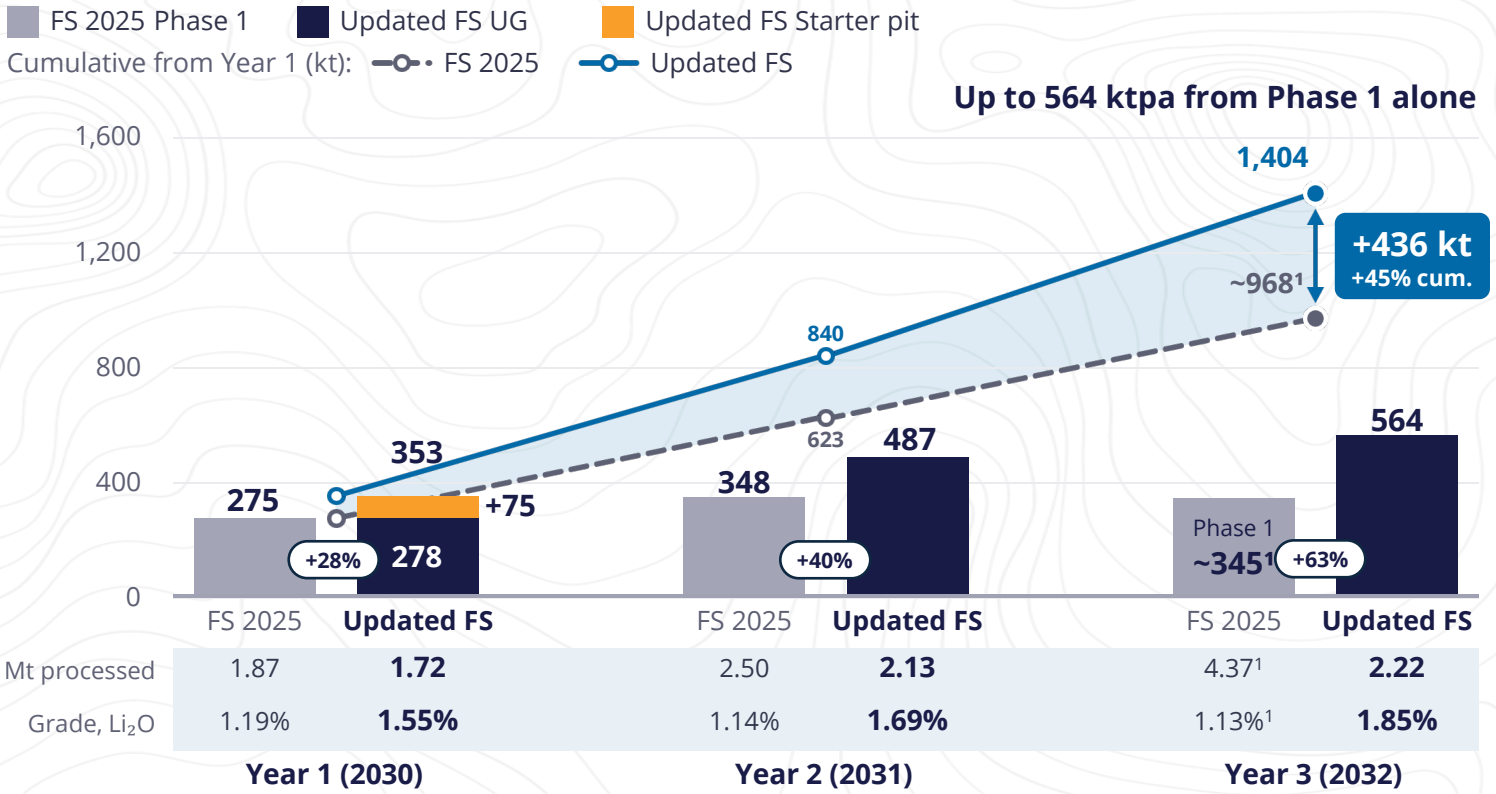

1. Included within the Project's Probable Mineral Reserve of 83.0 Mt at 1.27% Li_2O and 148 ppm Ta_2O_5 (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li_2O (open-pit) and 0.70% Li_2O (underground) with Effective Date of October 19, 2026.
2. See 2025 Feasibility news release dated October 20, 2025

UG First – Higher Grade Tonnes

Phase 1: High-grade UG Nova Zone generates more concentrate from less tonnes processed

Phase 1 concentrate production, kt SC5.5

Calendar years 2030–2032; % vs FS 2025

	FS 2025	Updated FS	FS 2025	Updated FS	FS 2025	Updated FS
Mt processed	1.87	**1.72**	2.50	**2.13**	4.37[1]	**2.22**
Grade, Li_2O	1.19%	**1.55%**	1.14%	**1.69%**	1.13%[1]	**1.85%**
	Year 1 (2030)		**Year 2 (2031)**		**Year 3 (2032)**	

Phase 1 – Updated FS vs FS 2025

+45%

More concentrate
Years 1–3: 1,404 vs ~968[1] kt
Peak: 564 (Y3) vs 348 kt (Y2)

–11.5%

Fewer tonnes processed
Years 1–3: 6.07 vs ~6.86[1] Mt
Processing capacity:
2.2 vs 2.5 Mtpa

Starter Pit

Assist UG production ramp-up in Year 1
Small-scale OP nestled within larger pit that provides 645 kt of ore

1. *FS2025 Phase 1 estimate: Year 3 Phase 1 ≈ 604 kt × 2.50 / 4.37 Mt = ~345 kt, assuming the same average grade on both lines (1.13%). Cumulative ~968 = 275 + 348 + ~345.*

Processing – DMS Only Flowsheet

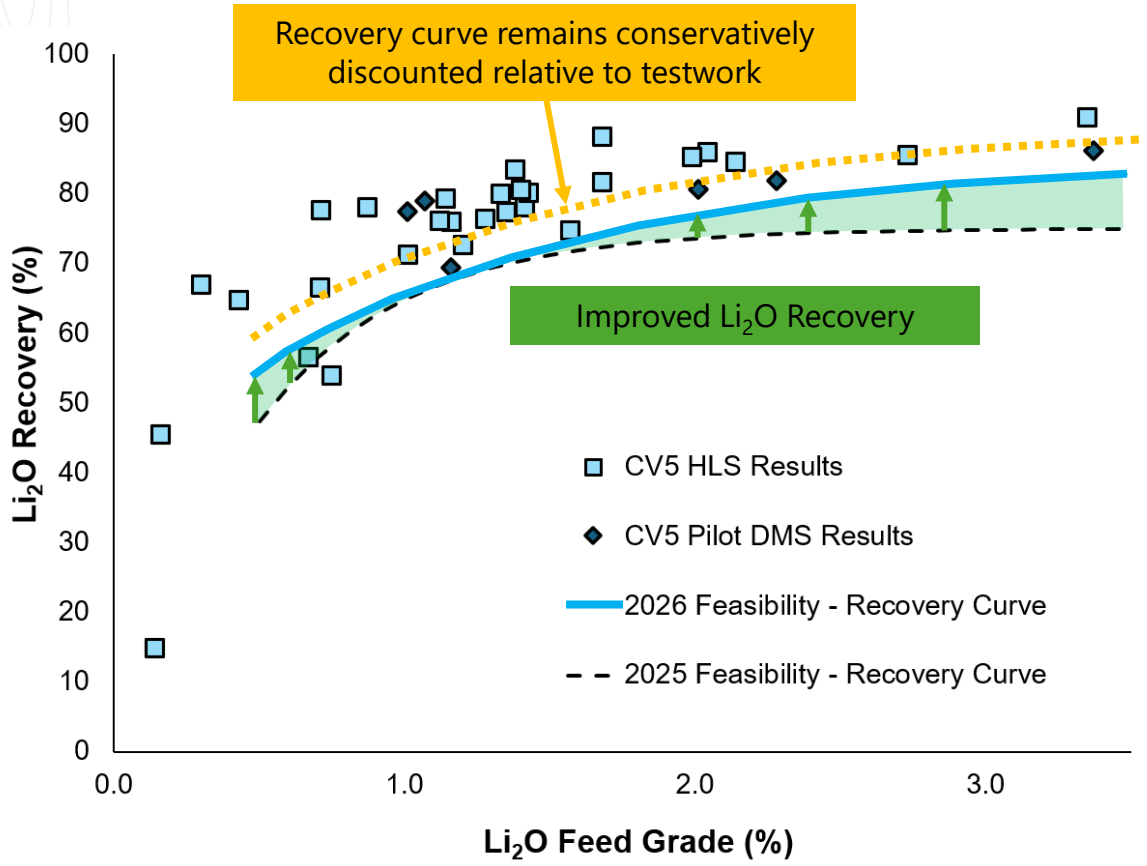

Simplified, smaller, and higher recovery DMS circuit compared to the 2025 FS

Simplified single-stage DMS flowsheet reduces plant footprint ~30%

Grade-recovery curve improved via inclusion of most recent ApplePick Pilot testwork program[1]

- **~0.8% lithium recovery gain on overall LOM** – from 68.9% (2025 FS) to 69.7% (Updated FS)
- Averaging **>74% Li_2O recovery** for first three years of Phase 1 (at 1.69% Li_2O head grade)
- The plant recovery curve expected for a full-scale DMS operation incorporates a conservative discount:
  - Relative to the improved recoveries supported through extensive testwork, and
  - Accounting for real-world DMS operating experience.

Recovery curve supported by extensive testwork over multiple programs (collectively totaling >10 t) of DMS piloting spanning open-pit, underground, and surface materials.

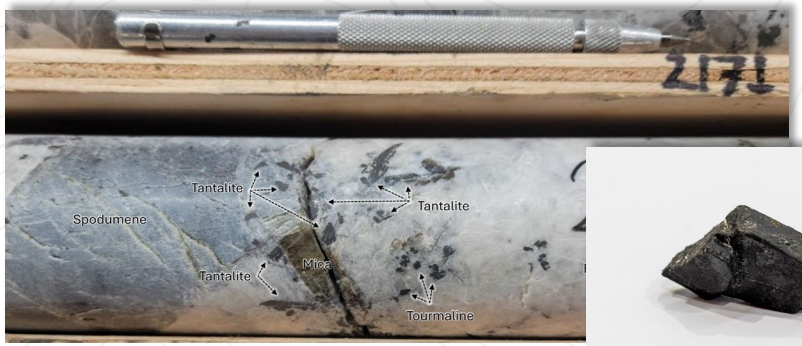

1. See ApplePick news release dated May 3, 2026.

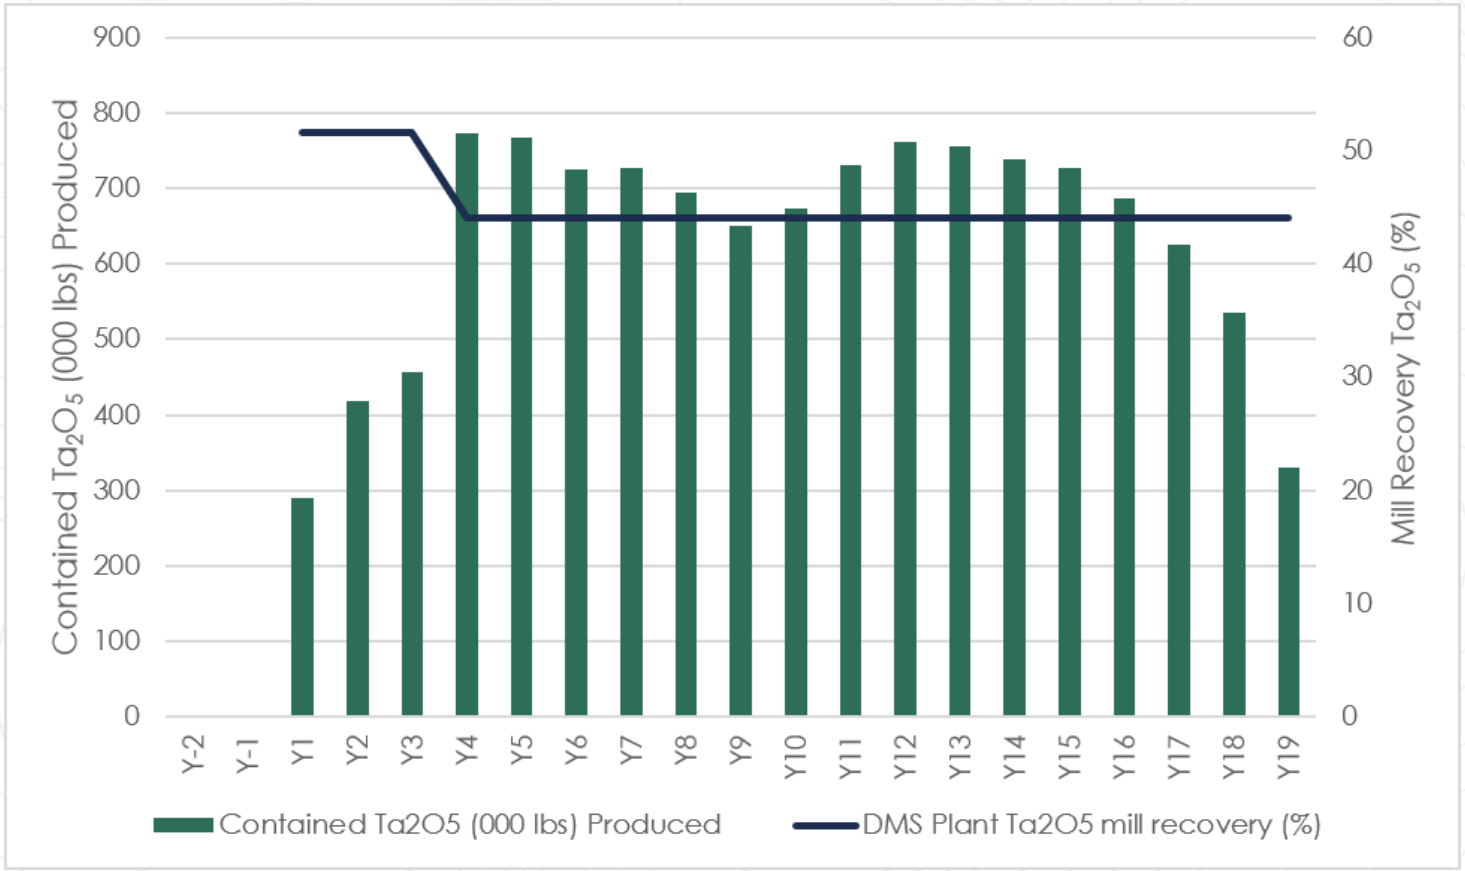

Processing – Tantalum Credit

Average LOM production of ~0.9 lb of contained Ta_2O_5 for every tonne of spodumene concentrate produced

- **Estimated LOM co-product credit of ~CA$148/t SC5.5 (~US$108/t)**[1] due to 20% Ta_2O_5 secondary concentrate capturing majority of the headline price
- **Simple physical processes** for recovery: ~CA$25M CapEx
- Maiden tantalum **Mineral Reserve of 83.0 Mt at 148 ppm Ta_2O_5** for 12.3 kt contained Ta_2O_5
- **PMET owns 100% of the tantalum rights** at Shaakichiuwaanaan

Tantalite crystal

1. Tantalum credit is calculated by dividing total revenue from tantalum recovered by the total dry tonnage of spodumene concentrate produced.

Financials

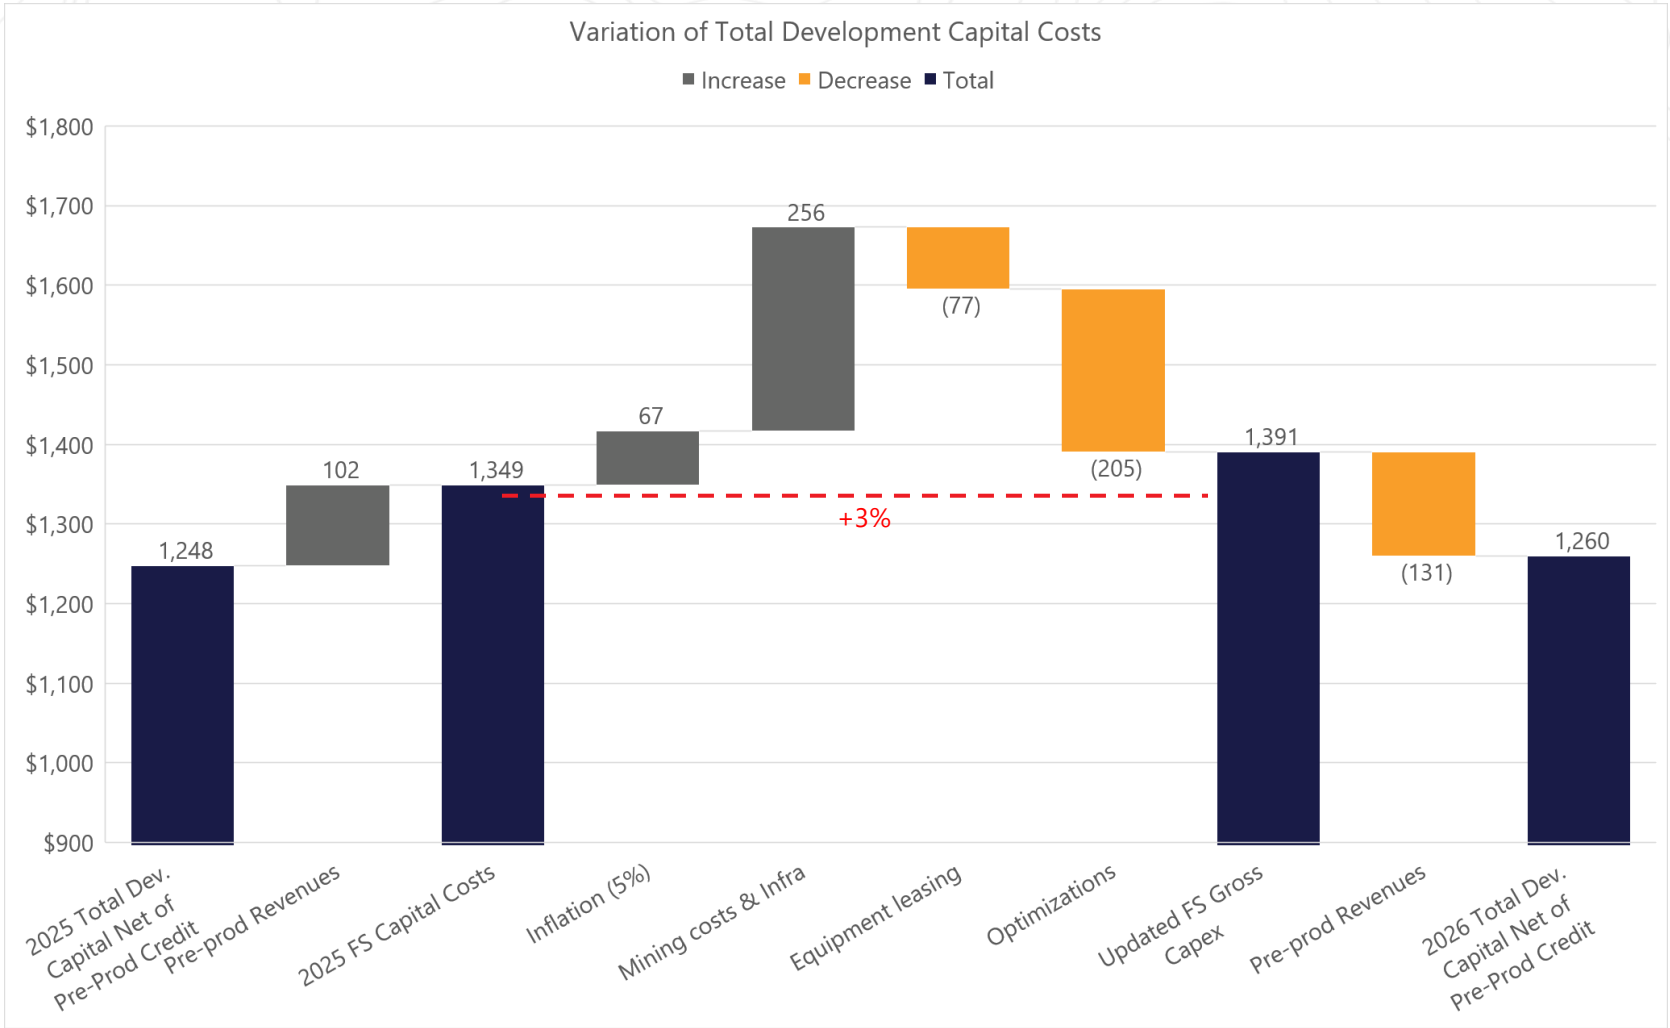

Capex Variation with 2025 FS[2] – Phase 1 only (in millions of CA$)

Phase 1 capital costs increased by approximately 3%, below the 5% inflation adjustment, despite bringing underground mine development and associated infrastructure forward into initial construction.

DMS improvements, phased spending on tailings and water management, equipment leasing and other optimizations largely offset these pressures.

Allowing for tax credits, Phase 1 Initial Net Capital Cost totals CA$1,080 million[1] vs CA$1,008 million in the 2025 Feasibility Study[2].

1. Phase 1 Initial Net Capital Cost includes CAPEX of CA$1,391M, less estimated Canadian Clean Technology Manufacturing - Investment Tax Credits ("CTM-ITC") tax credits of CA$136M, less estimated Tax Credit Relating to Resources ("TCRR") of CA$45M and includes pre-production credits of CA$131M. 2. See feasibility study news release dated October 20, 2025.

CapEx Variation with 2025 FS – Phase 1 & 2 (in millions of CA$)

Total development capital costs increased by CA$85 million, or 4.0%, from CA$1,978 million in the 2025 FS[1] to CA$2,063 million in the Updated FS.

The main drivers of the increase are:

- a 5% inflation adjustment to the 2025 FS capital estimate;
- higher mining and infrastructure costs, including underground mine development brought forward into the construction period.

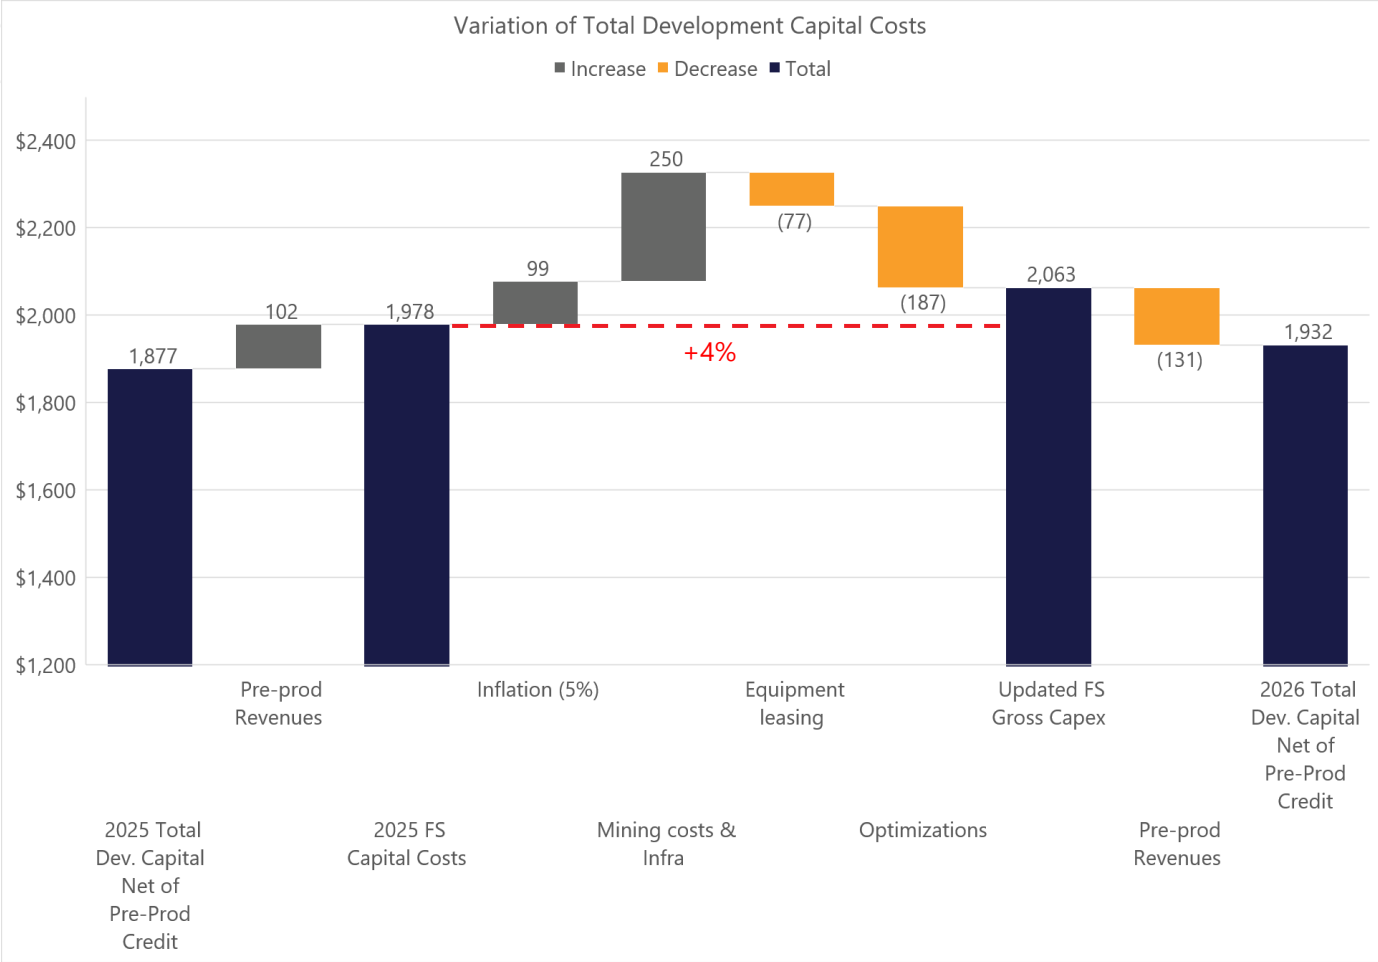

These increases are largely offset by:

- the transition from purchasing to leasing mining equipment;
- DMS optimization and lower indirect and owner's costs.

Capital Intensity (Phases 1 and 2) ~CA$1,675 per tonne of spodumene concentrate (SC5.5)

At nominal production capacity[3]
~CA$2,094 per tonne of spodumene concentrate (SC5.5)

At nameplate capacity[3]
~CA$328 per tonne milled

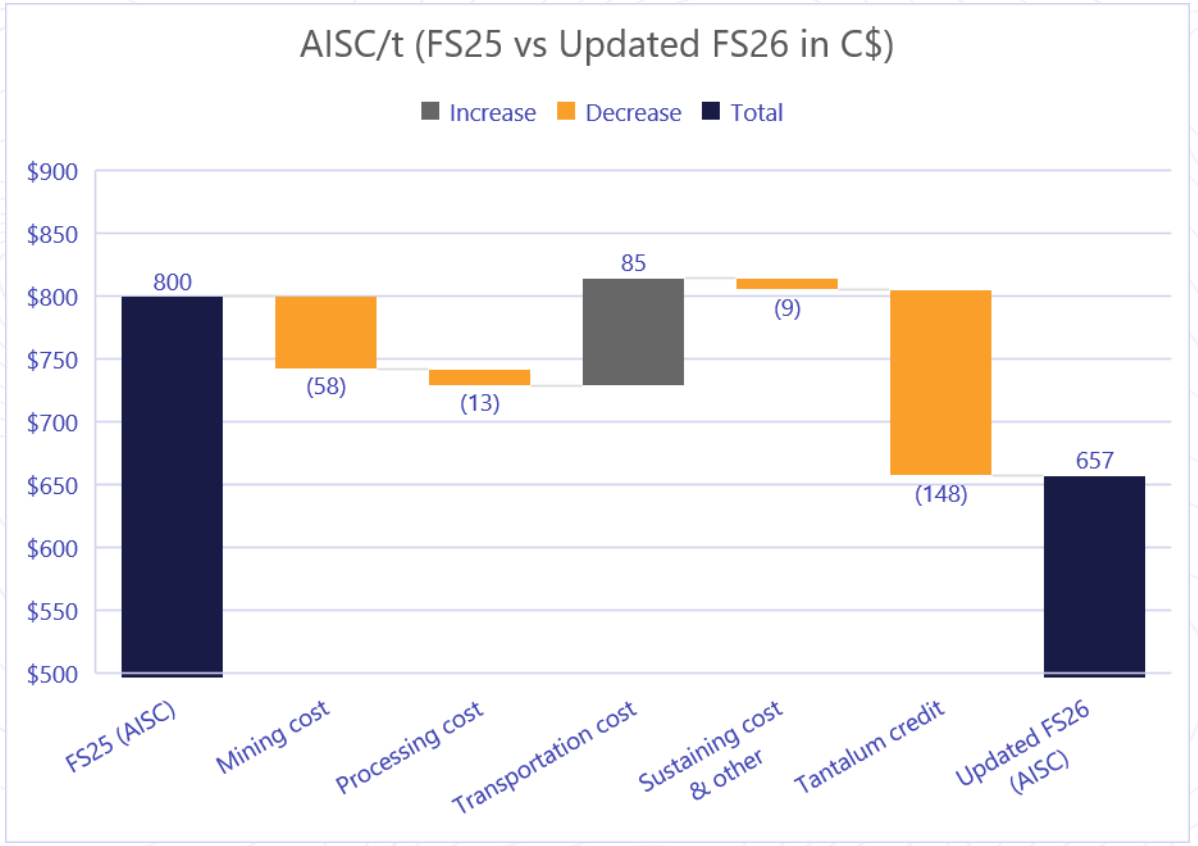

1. *See Feasibility Study news release dated October 20, 2025.*
2. *Reflecting Total development capital net of pre-production credit of CA$1,932 million and CA$258 million in tax credits (subject to eligibility)*
3. *The total nameplate processing capacity is 5.1Mtpa generating nominal production capacity of ~800,000 tpa spodumene concentrate (SC5.5).*

AISC Variation with 2025 FS

- Spodumene cash operating costs at site decrease by 14.4%, from CA$511.9/t to CA$439.0/t, primarily driven by mining efficiencies. Standardised and higher inter-level spacing (resulting in taller, larger tonnage stopes on average) led to reduction of 16% in development requirements, offsetting higher cement costs. Separately, a review of staffing requirements has reduced the estimated workforce needed for operations.
- Transportation costs increase from CA$217.2/t to CA$302.3/t, reflecting general inflationary pressure, diesel surcharge impacts and scope elements (which include but are not limited to truck/rail-car size, intermodal and port costs).
- The CA$147.8/t tantalum credit more than offsets this transportation increase and helps reduce AISC by approximately 18%, from CA$799.8/t to CA$657.1/t.

	Updated FS		FS
Production Costs per Concentrate Tonne	US$/t	CA$/t	CA$/t
Mining	191.6	262.5	320.1
Processing	57.0	78.1	91.2
Site Administration	71.8	98.4	100.7
Spodumene Cash Operating Cost at Site[2]	**320.4**	**439.0**	**511.9**
Tantalum Credit	(107.9)	(147.8)	-
Net Cash Operating Cost at site[3]	**212.5**	**291.2**	**511.9**
Transportation cost	220.7	302.3	217.2
Total Cash Operating Cost - (FOB Quebec ports)[4]	**433.2**	**593.5**	**729.1**
Sustaining Capital	46.4	63.6	70.7
All-In Sustaining Cost – (FOB Quebec ports)[1]	**479.6**	**657.1**	**799.8**

1. All-in sustaining costs ("AISC") includes mining, processing, site administration, and product transportation costs to a port in Quebec and tantalum credit but excluding royalties and sustaining capital over the LOM per unit of concentrate produced during the LOM. It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" in Important Information for further information on these measures. 2. Spodumene Cash operating cost at site includes mining, processing, and site administration excluding royalties, it is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" in the Important Information section for more information. 3. Net Cash Operating cost at site includes mining, processing, site administration, and tantalum credit but excluding royalties . It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures. 4. Total cash operating cost (FOB Quebec ports) includes mining, processing, site administration, tantalum credit and product transportation to a port in Quebec excluding royalties . It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures.

Activity Cost Analysis

Very low costs at site, partially offset by logistics costs

Net Cash Operating Cost at Site[1] US$212.50/t

- **Low cost, renewable power** (~CA 5.7cents/kWh)
- **High-grade UG** in wide pegmatite host
  - Productive long-hole open-stoping methodology with multiple stoping fronts
- **Low strip ratio in OP**
  - 3.5:1 over LOM within the pit
- **DMS-only processing** at relatively high rates of recovery
  - ~70% LOM lithia recovery, higher in earlier years
- **Significant tantalum co-product credit, US$108/t LOM**

Logistics Cost US$220.66/t

- ~830 km Truck Haul
- Transhipment at Matagami
- ~1,000 km Rail Haul to Quebec port

Total Cash Operating Cost[2] US$433.16/t

		FS	FS+	Diff.	Diff %
Open Pit - Mining costs	CA$/t mined	6.42	**6.45**	0.03	0%
Underground - Mining costs	CA$/t milled	81.26	**62.52**	(18.74)	(30%)
Processing costs	CA$/t milled	14.33	**12.61**	(1.72)	(14%)
G&A cost	CA$/t milled	15.83	**15.81**	(0.02)	(0%)

- Underground mining costs decrease primarily driven by mining efficiencies. Standardised and higher inter-level spacing (resulting in taller, larger tonnage stopes on average) led to reduction of 16% in development requirements, offsetting higher cement costs.
- Processing costs reflect various optimizations such as single stage DMS and simplified flowsheet.
- Separately, a review of staffing requirements has reduced the estimated workforce needed for operations.

1. Net Cash Operating cost at site includes mining, processing, site administration, and tantalum credit but excluding royalties . It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures.
2. Total cash operating cost (FOB Quebec ports) includes mining, processing, site administration, tantalum credit and product transportation to a port in Quebec excluding royalties . It is a non-IFRS measure, and when expressed per tonne, a non-IFRS ratio. Refer to "Non-IFRS and other financial measures" for further information on these measures.

OpEx Variance – Concentrate Transport

+CA$85/t (+39%) vs the 2025 FS, primarily driven by inflation, trucking and rail payloads, rates and fuel

The Updated FS has been developed with updated and detailed budgetary quotes from existing local operators, with a view to decrease logistics risk

Trucking +CA$52.85/t

- General inflationary pressure
- Updated truck quote: CA$145/t vs CA$95/t in the 2025 FS (wet)

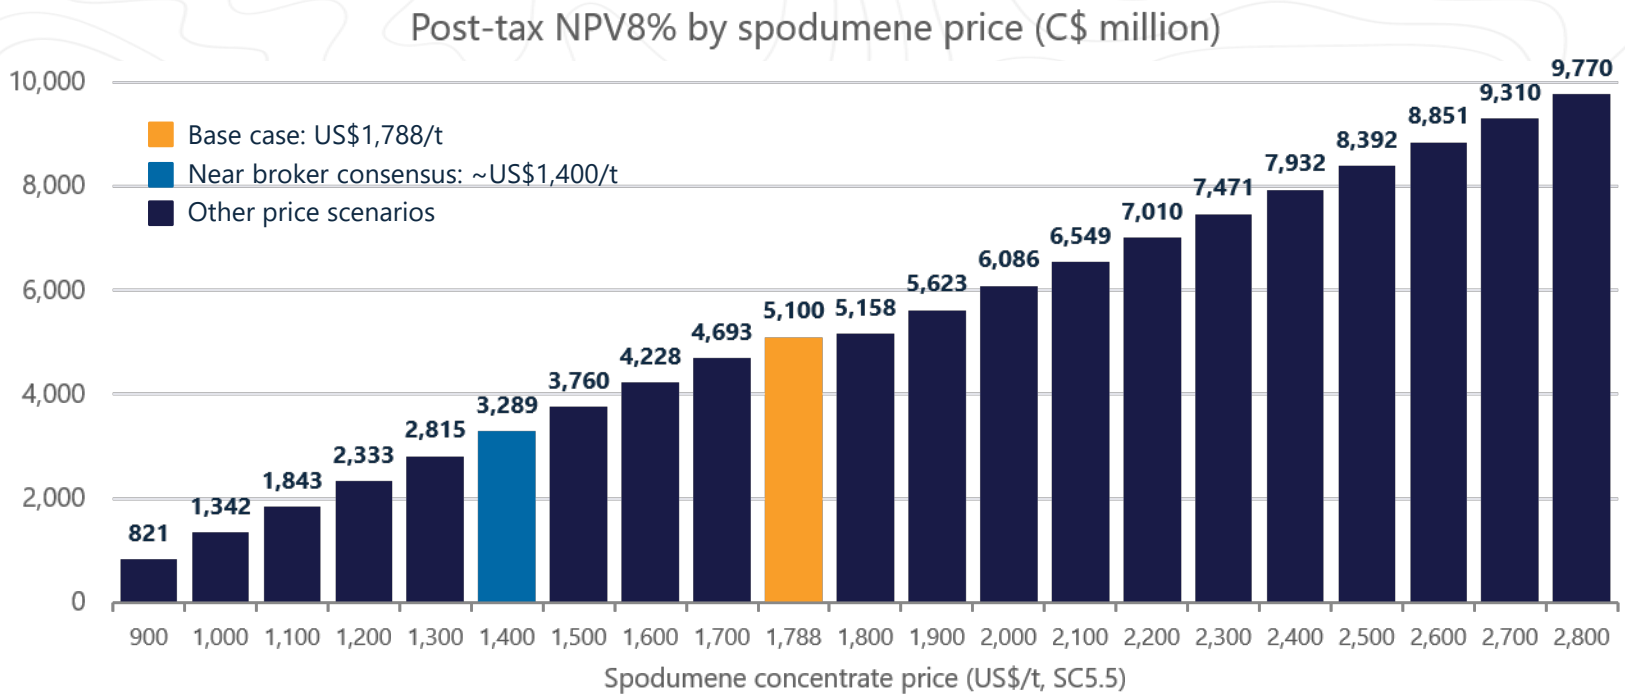

Rail +CA$35.55/t

- General inflationary pressure
- Higher CN rate; rail fuel now itemized
- 86 t vs 93 t payload per railcar
- Higher railcar and cover rental

Transload & port (CA$3.56/t)

- Matagami transload +CA$2.68/t
- Port (Québec) −CA$6.24/t

Sensitivity Analysis – Post-Tax $NPV_{8\%}$

Base case $NPV_{8\%}$ ~C$5.10B

- Updated FS price: US$1,788/t
- ~US$3.72B post-tax $NPV_{8\%}$

Near-consensus $NPV_{8\%}$ ~C$3.29B

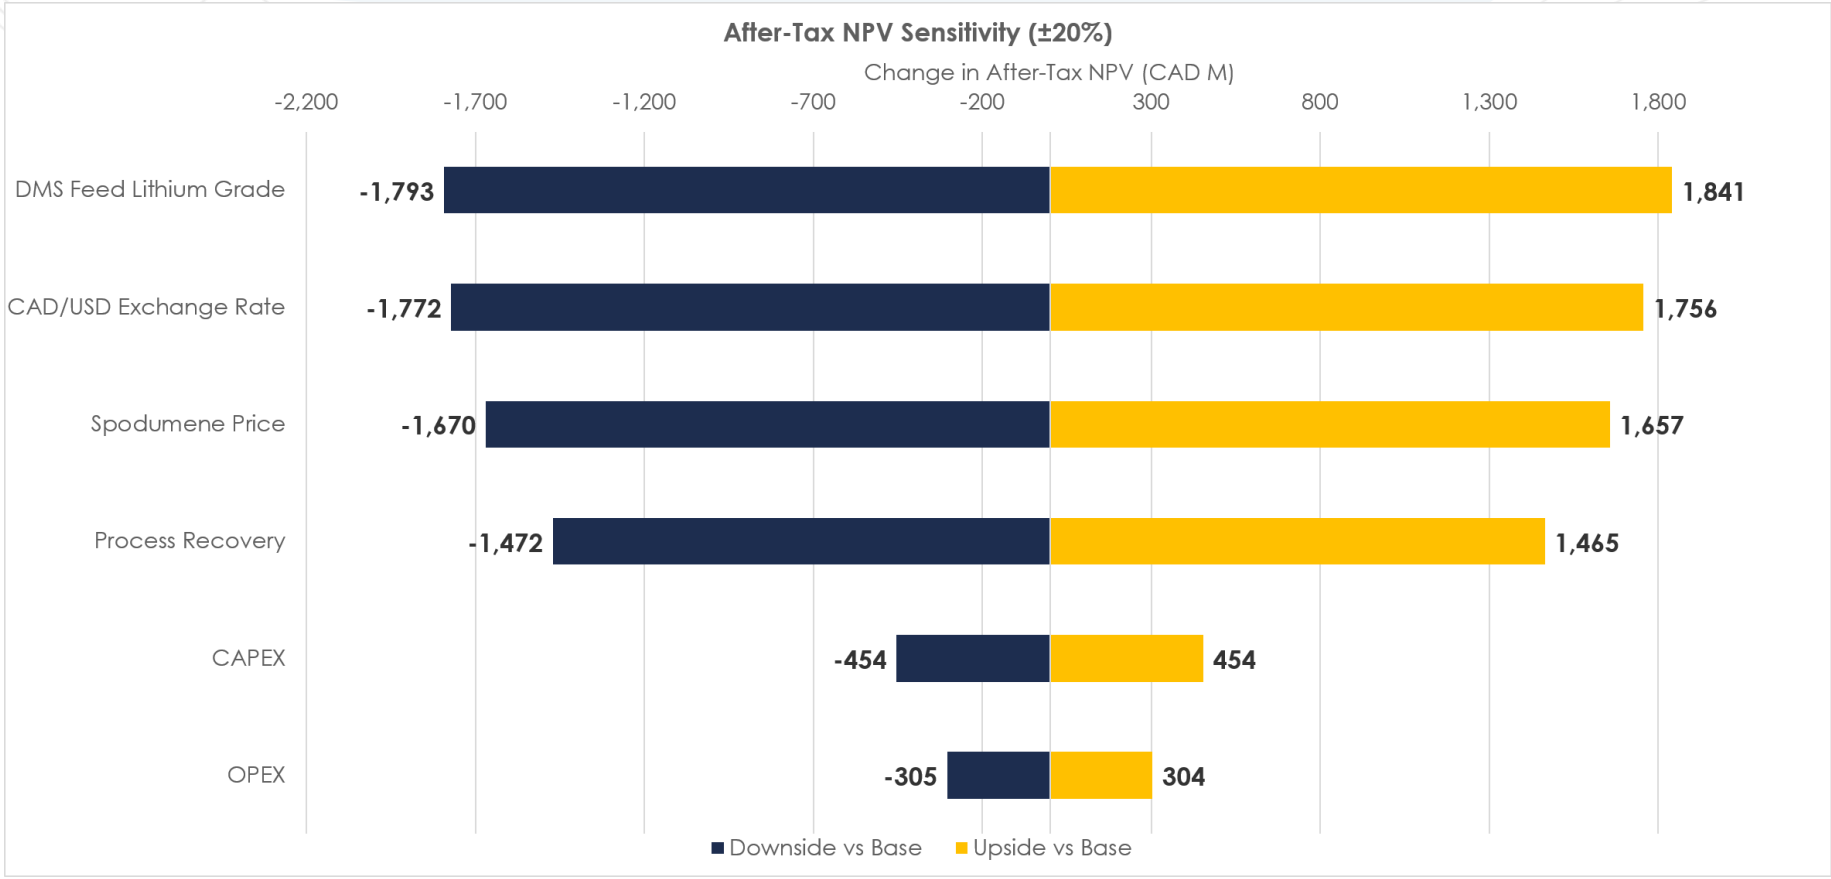

- Near-broker consensus: ~US$1,400/t
- ~US$2.40B post-tax $NPV_{8\%}$

For every US$100/t change in the spodumene concentrate price (SC5.5), post-tax $NPV_{8\%}$ moves by ~C$465M

Sensitivity Analysis

The Project is most sensitive to revenue factors, including:

- lithium grade (%Li_2O),
- spodumene concentrate price, and
- exchange rate outcomes.

Building a Strong Financial Foundation

PMET has **CA$176M of cash-on-hand**[1] and is assembling a sophisticated group of financial partners to advance the Shaakichiuwaanaan Project.

Next Steps and Further Optimisation

Next Steps – CV13 PEA

Exploring an alternative development scenario inclusive of both CV5 and CV13 and on three commodities – lithium, caesium, and tantalum

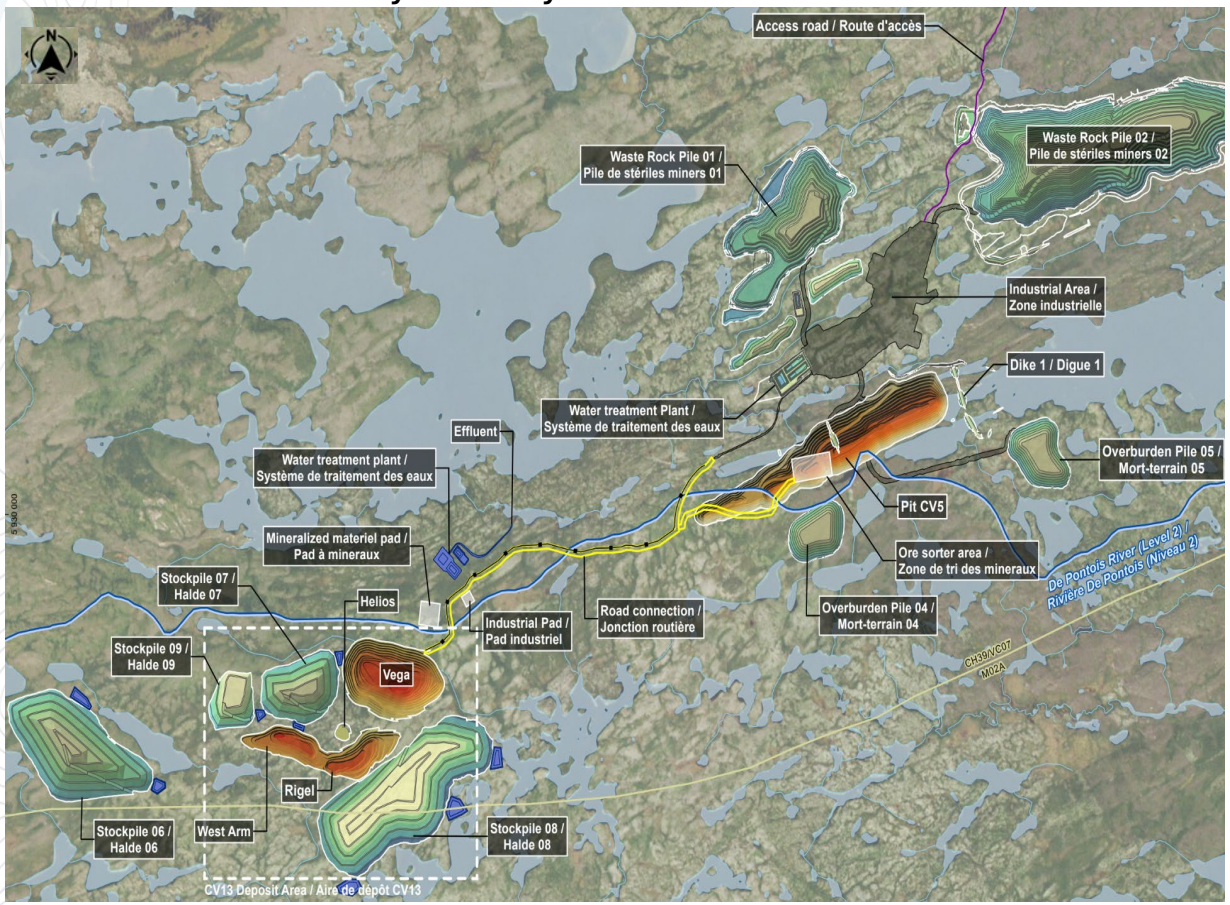

The Company is targeting release of a Preliminary Economic Assessment ("PEA") this quarter, assessing an alternative overall project development scenario:

- inclusive of both CV5 and CV13 mining areas,
- bringing forward the high-grade CV13 resource,
- developing all 3 critical mineral concentrates for lithium, caesium, and tantalum.

Building on the recent CV5 Updated Feasibility Study

Project works continue in respect of CV13 in preparation for future ESIA authorisation, including site-based environmental works and community engagement.

CV5/CV13 Preliminary Site Layout

Next Steps – Bulk Sample

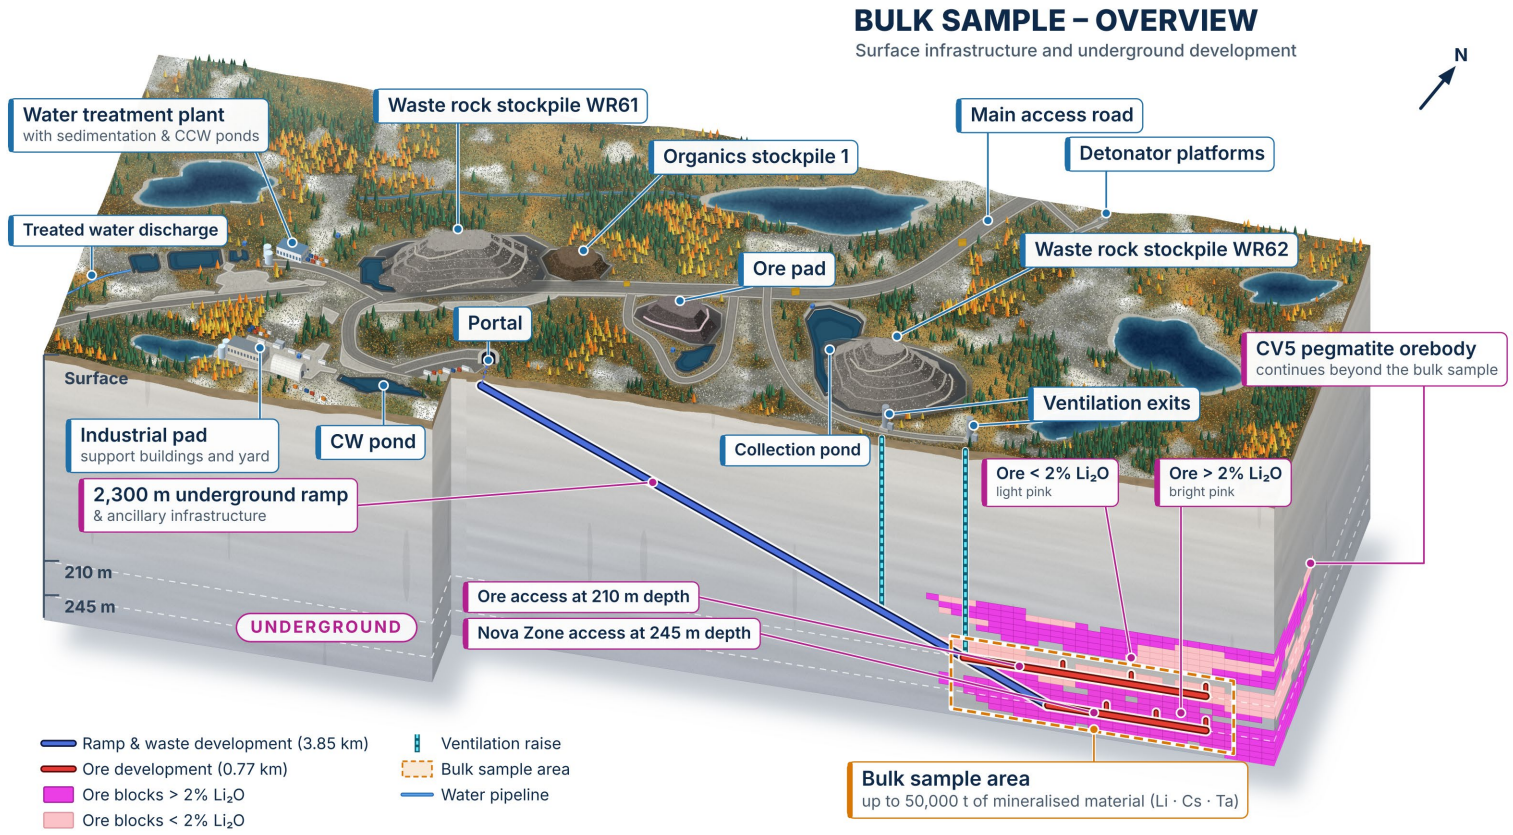

Accessing the underground area, including targeting well-mineralized lithium-caesium-tantalum intercepts within the high-grade Nova Zone, to improve geological understanding.

Initial authorisation anticipated shortly for the development of a 2,300 m underground ramp and ancillary infrastructure:

- Ore access at 210 m depth from surface
- Ore access at 245 m depth (Nova Zone)

Extraction of up to 50,000 tonnes of mineralised material representative of a wide range of grades for lithium, caesium, and tantalum

Provides further technical de-risking of the overall project development, inclusive of expected benefits to further testwork in each of lithium, caesium, and tantalum programs.

Strategic Partners - Offtake Strategy

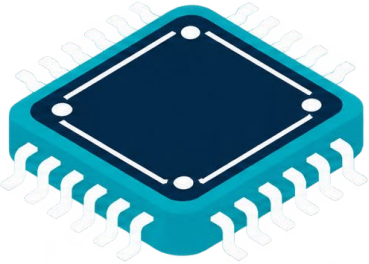

Engagement underway leveraging available lithium and tantalum offtake for Project funding

STRATEGY

- Offtakes to target market pricing with customer diversification by geography and position in the battery supply chain.
- Scale, longevity, and a multi commodity suite, provides opportunity for PMET to potentially build a consortium of strategic offtake partners to help fund and support the Project.

Lithium

Tantalum

Caesium

LITHIUM

- Up to ~700 ktpa of SC5.5 for Phase 1 + 2 remains uncommitted and available for future offtake funding opportunities.
- 100 ktpa 10 years already placed with PowerCo/Volkswagen[1]

TANTALUM

- Up to 635,000 lbs per annum of contained Ta_2O_5 available for offtake.

CAESIUM

- World's largest pollucite-hosted caesium pegmatite Mineral Resource[2] at CV13 has potential to create an expanded western supply chain which can support existing and emerging applications.
- A rare and valuable commodity which can potentially diversify and enhance the Company's future revenues.

2. *Refer to Annexures for supporting information.*

World-Class Partners and Relationships

Building strategic relationships — with global leaders in battery materials, electric mobility, and specialty chemicals — validating industry confidence in Project quality and longevity.

AUG 2023
Albemarle

CA$109M Strategic Investment

The world's largest lithium producer made a landmark CA$109 million strategic investment for 4.9% of the company, providing both project validation and global lithium raw materials market credibility.

DEC 2024
Volkswagen / PowerCo

Strategic Investment + Long-Term Offtake

Volkswagen invested CA$69M for 9.9% of the company at a 65% premium to prevailing market prices at the time, while its battery subsidiary PowerCo committed to a strategic long-term offtake agreement.

APR 2026
Koch Technology Solutions

Evaluating Downstream Caesium Processing Opportunities

Koch Technology Solutions brings proprietary critical minerals processing technology, downstream expertise, and downstream commercial relationships in the critical minerals sphere.

JUNE 2026
Primero/Mitsui/MWCC

Primero's proprietary process identified as the **preferred value-added** pathway for Shaakichiuwaanaan spodumene concentrate with the potential to combine with **Mitsui/MWCC** microwave electric calcination technology

CA$190M

Strategic Investments to-date

Key funding by global players to accelerate project development

2027 FID

Targeted Late 2027

CA$176M cash-on-hand (June 30, 2026)

Further opportunities to add value at Shaakichiuwaanaan

LG4 hydroelectric infrastructure is a key advantage and only ~45 km from the Project

Potential access to low-cost renewable power is a key project characteristic that could underpin electric calcination and on-site lithium conversion.

On-site conversion: Mitsui + ALi®

Electric calcination + 99.8% Li_2CO_3

Microwave technology under evaluation using Shaakichiuwaanaan samples[1]. Hydroelectricity could replace fossil-fuel heating and materially lower cost and carbon intensity of calcination.

Primero's atmospheric leach process is the preferred route for further study. Battery-grade lithium carbonate achieved at bench scale using project concentrate[2].

Potential value: Higher-value lithium products in Québec, with much lower transport volumes and costs.

La Grande Alliance

Regional connectivity

Studies examined a Route 167 link (the 'Renard Extension') to the Trans-Taiga and regional rail / port corridors[3].

If developed, new transport options could lower distances and costs, while improve logistics flexibility.

Potential value: Lowering one AISC cost component with stronger regional supply chains.

Project Infrastructure

Plant Modularisation

Work is underway to consider the potential of plant modularisation of crushing/ screening, DMS/Tantalite recovery circuits and pastefill plant facilities.

Early contractor engagement underway

Potential value: Lower plant development costs and/or plant construction timeframes

Sources 1. See PMET Mitsui MOU, June 17, 2026 2. See PMET Concept Study on ALi , June 14, 2026 3. See Cree Development Corporation and La Grande Alliance websites. project NPV, cost savings, power agreement or infrastructure schedule is asserted.

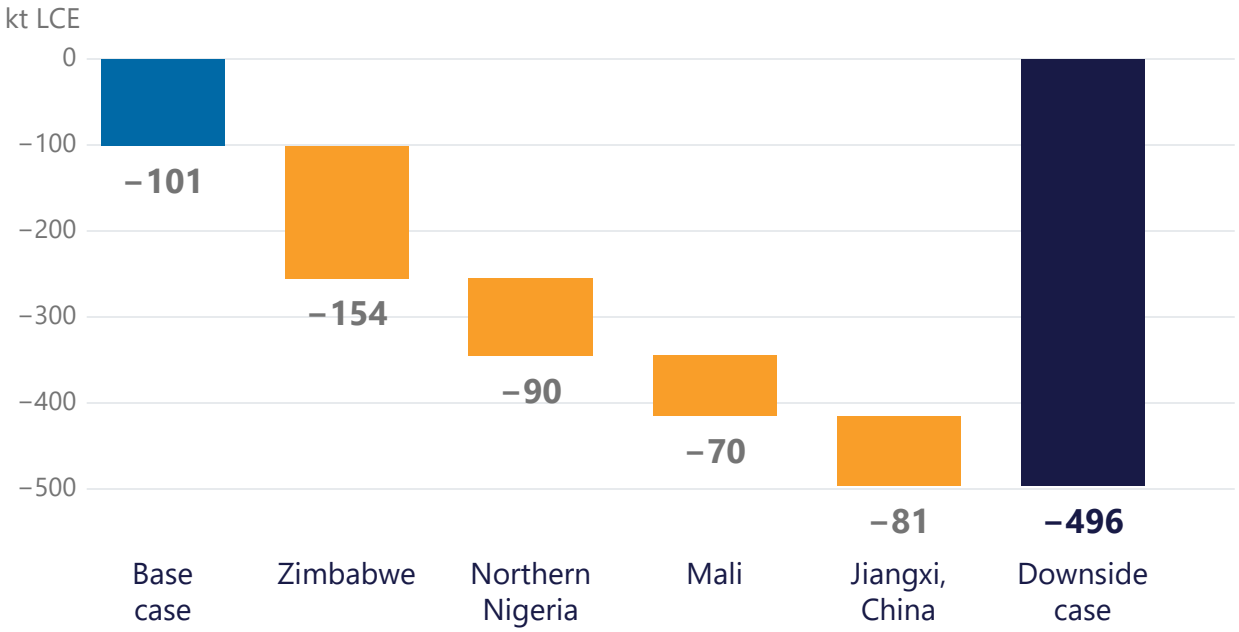

Lithium & Tantalum Market Update

Lithium Supply Is Becoming More Exposed To Disruption

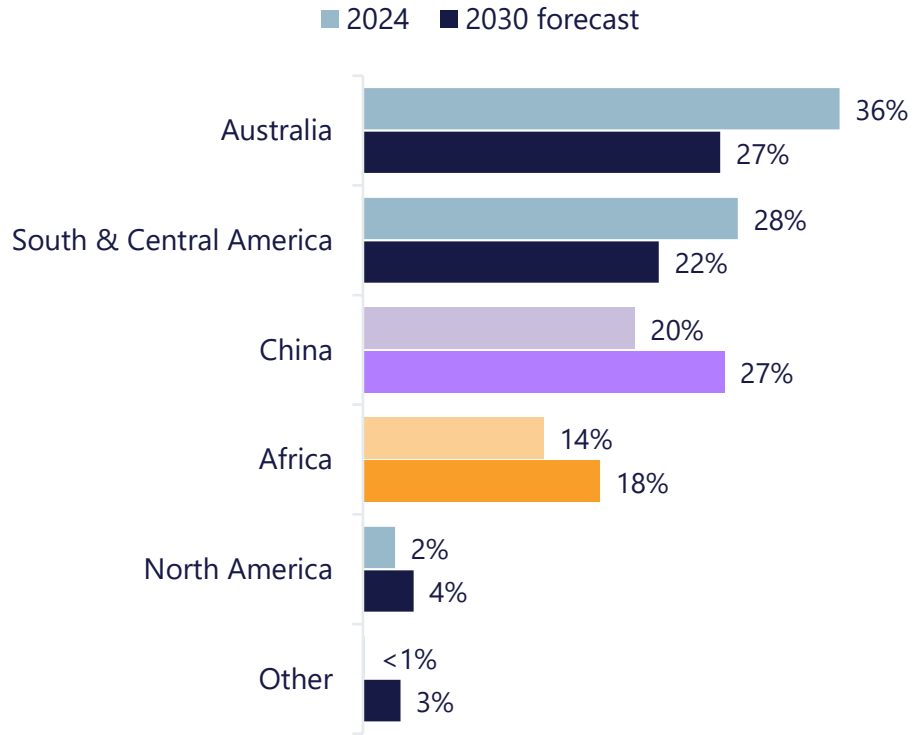

Africa's share of mined supply rises from 14% in 2024 to 18% in 2030; China from 20% to 27%

2027 market balance under supply-risk scenarios

The −496 kt LCE downside case equals ~22% of total 2027 supply (2.22 Mt LCE, base case)

Geographic share of mined lithium supply

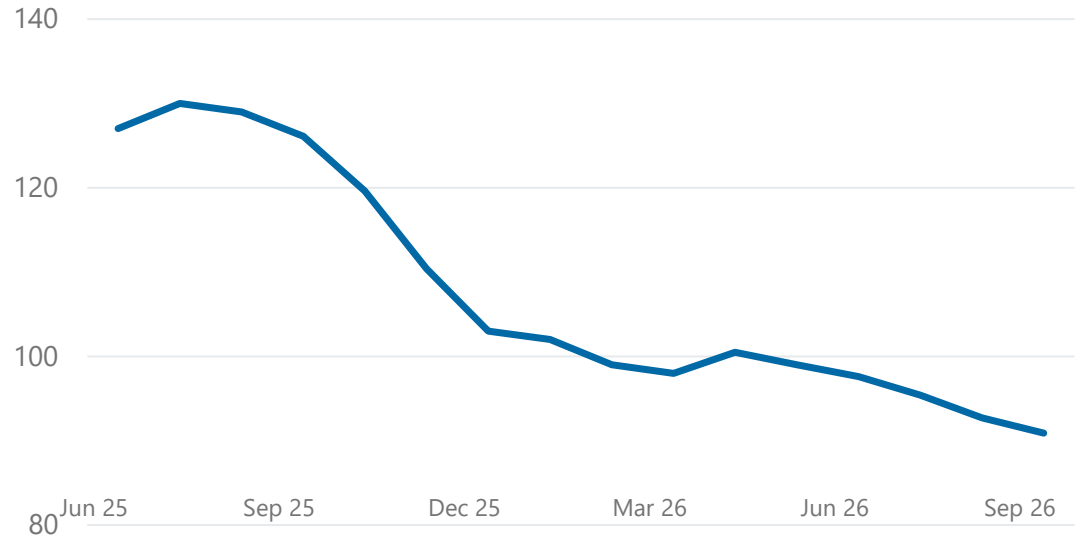

Sources: Benchmark Q3 2026.

Inventories Are Falling In What Appears An Undersupplied Market

China's lithium chemical stocks fell 28% year over year through September 2026

China lithium chemical inventories[1]

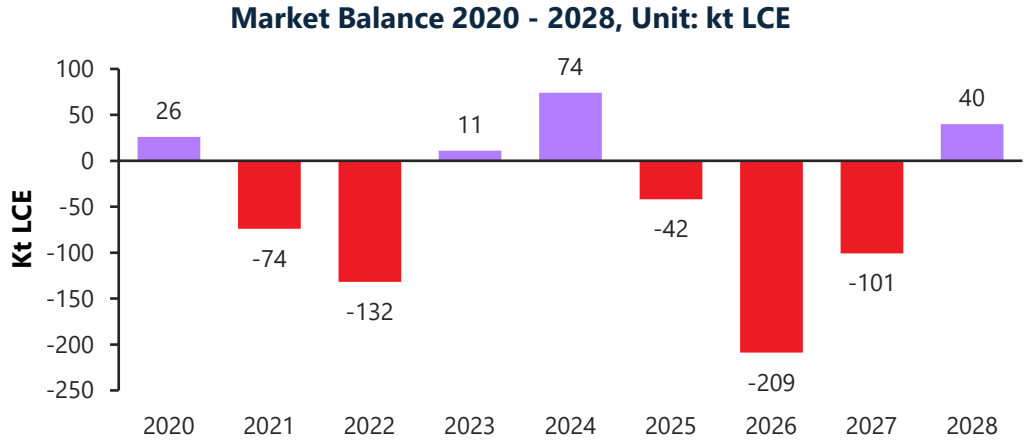

Monthly, thousand tonnes LCE

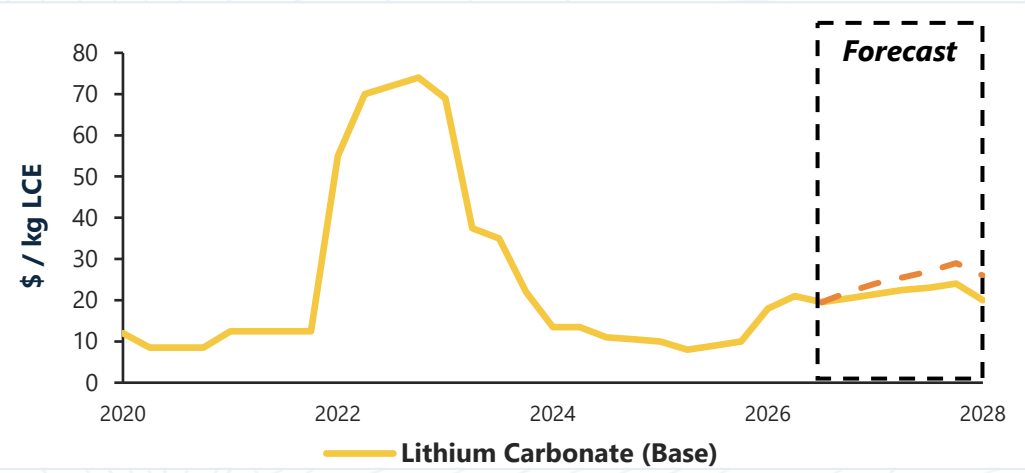

90.9 kt
September inventory

−28%

1.5 TWh battery demand in first 8 months of 2026

BESS growth has been a key new driver to lithium demand, and will likely rapidly take-over lithium-ion battery deployment in EV's

YTD to August EV Battery Deployment[1]

813 GWh

+17% YoY | **54%** of total

YTD to August Cell Shipments[2]

694 GWh

+105% YoY | **46%** of total

Combined EV battery deployment and BESS cell shipments reached 1,507 GWh in the first 8 months of 2026 — only 100 GWh short full-year 2024 battery demand.

Full Year 2026 target from Benchmark Minerals: over 3 TWh — **almost 2x bigger in 3 years, and 16x bigger than 2018 battery market[3]**

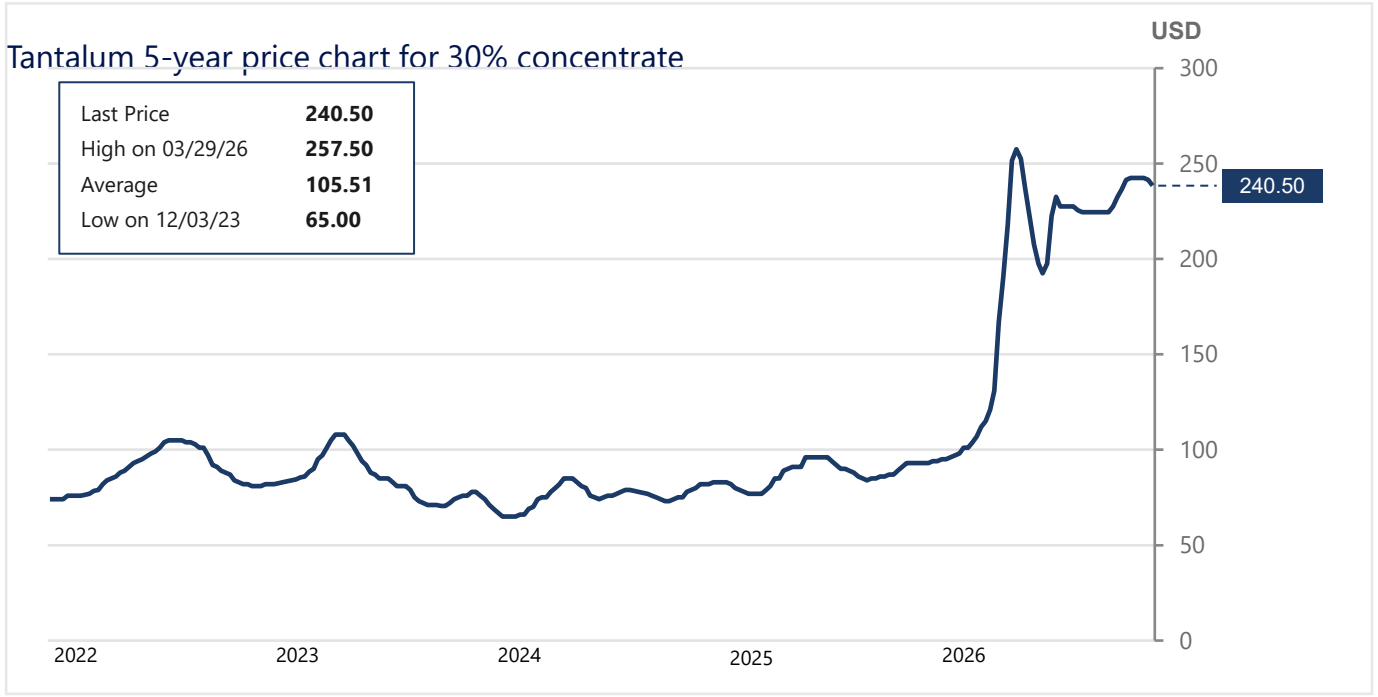

Source:
1. Benchmark Minerals October 2026 Monthly EV & Battery Assessment
2 + 3. Benchmark Minerals Battery Demand Service October 2026

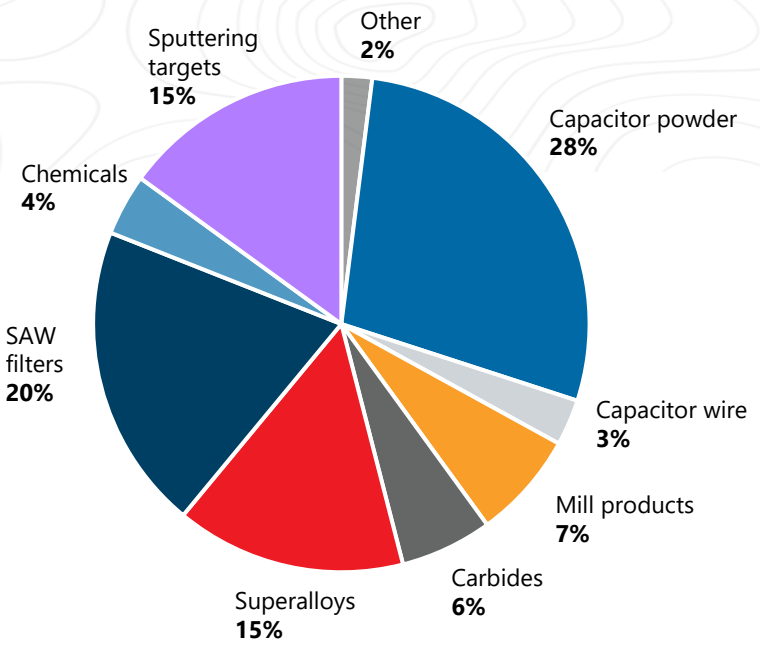

Tantalum demand growth and recent price environment

Demand is broad within the electronics industry: capacitors, SAW filters, sputtering targets, superalloys, carbides and mill products.

- **AI data cards are exceptionally tantalum-intensive.**
- In key applications, availability is the larger risk than price because redesign and requalification are difficult.

The tantalum market is tied to AI, data mobility, chips, aerospace and defense.

Forecast tantalum demand[1]

Mineral Reserves are presented on a 100% basis and inclusive of reserves where applicable. Greenbushes & Wodgina, although producers of Ta from pegmatite, do not report Ta in their current Mineral Reserve Estimates. Shaakichiuwaanaan Mineral Reserve (CV5 Pegmatite only) cut-off grade is 0.40% Li_2O (open-pit) and 0.70% Li_2O (underground) with Effective Date of October 19, 2026. See Appendix for further details.

Exploration Upside / Blue Sky (Lithium-Tantalum)

Considerable Potential for Continued Resource and Reserve Growth

- Current Mineral Resource (MRE-5) includes the CV5, CV13, and CV4 pegmatites, which remain open in multiple directions.
- The ~1.5 km gap between CV4 and CV5 represent a key target for near-term resource growth.
- 6 LCT Pegmatite clusters remain to be drill tested.
  - Including >10 km long Mickel Trend
- Mineral Reserve[1] includes only the CV5 Pegmatite and comprises only 56% of total Mineral Resources[2].

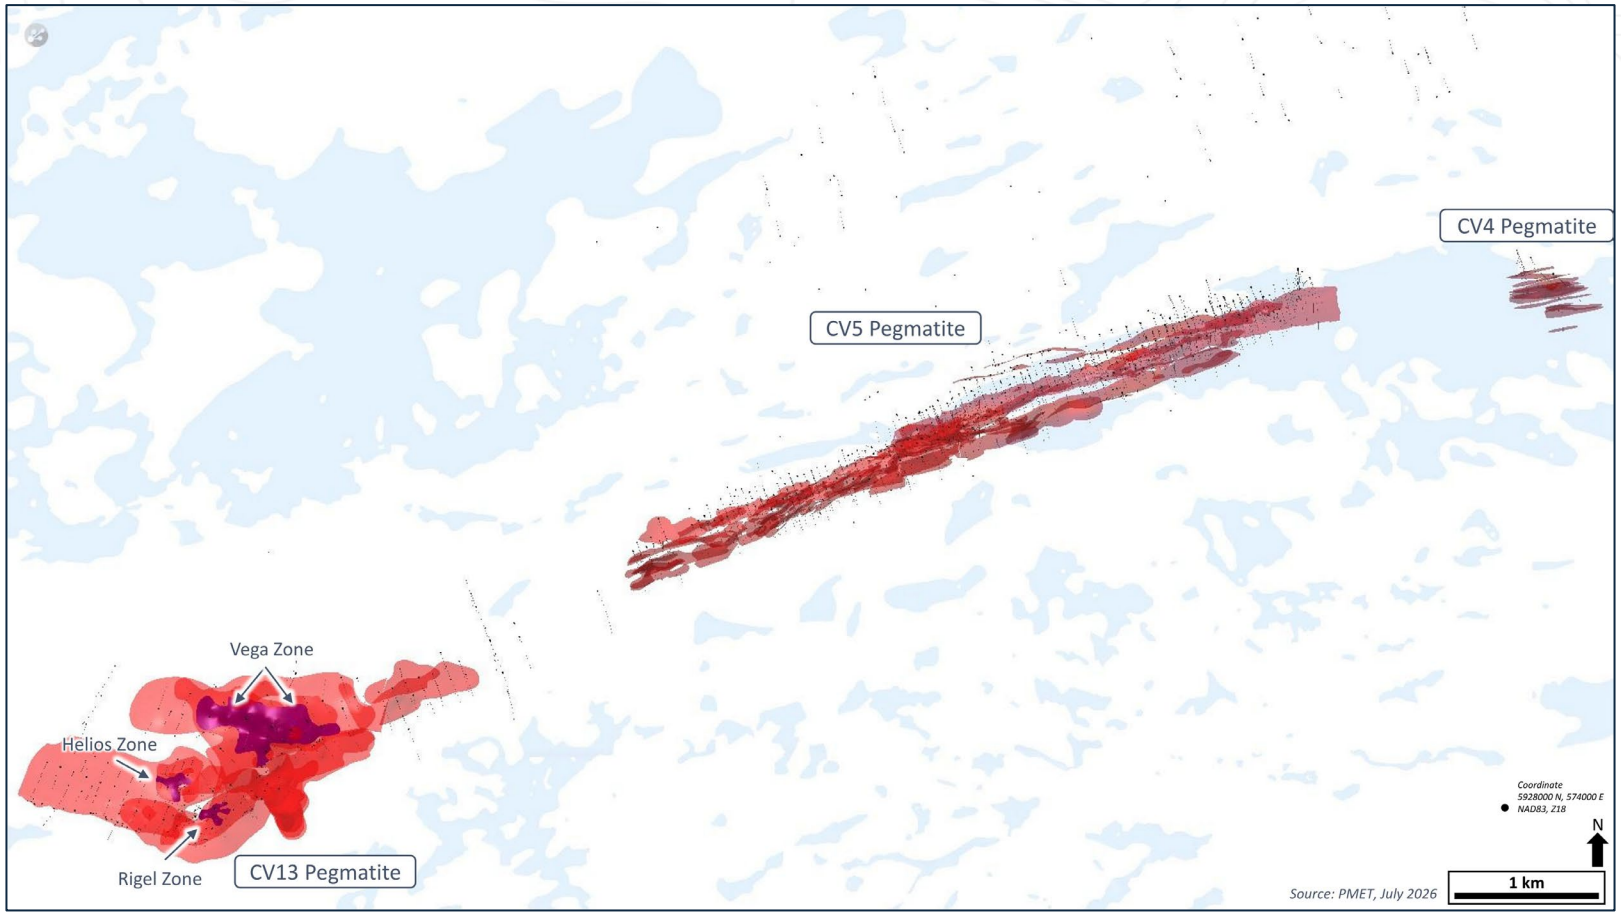

1. Probable Mineral Reserve of 83.0 Mt at 1.27% Li_2O and 148 ppm Ta_2O_5 (all within the CV5 Pegmatite) at a cut-off grade of 0.40% Li_2O (open-pit) and 0.70% Li_2O (underground) with an Effective Date of October 19, 2026. 2. Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

CV5, CV13, and CV4 Pegmatite Geological Models

- MRE is the fifth for the Project (MRE-5) to date.
- Includes the CV5, CV13, & CV4 pegmatites only, as well as the Caesium Zone MRE (entirely within CV13).
- The CV5, CV13, and CV4 pegmatites have strike lengths of 5.0 km, 3.2 km, and 0.3 km, respectively, and all remain open in multiple directions.
- Caesium Zone MRE includes Rigel, Vega, and newly estimated Helios Zone.
- Includes maiden rubidium resources in the Caesium Zone MRE only.
- Approximately 61% of the Consolidated MRE[1] tonnage is contained within a single dyke at CV5 (87.4 Mt at 1.44% Li_2O, Indicated)

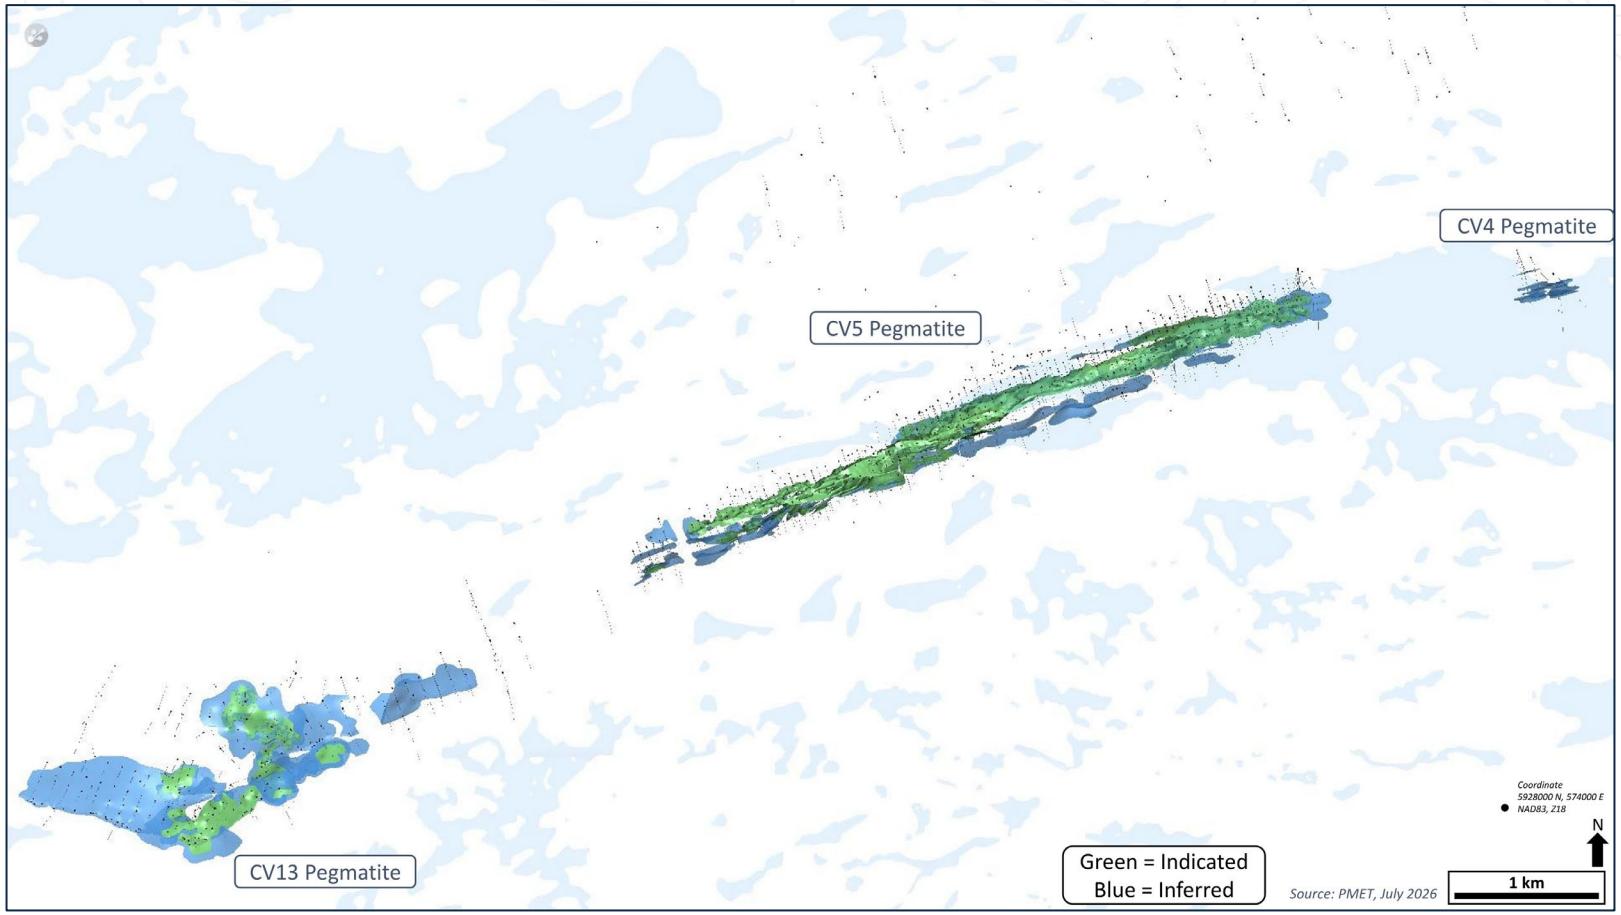

1. Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). A grade constraint of 0.50% Cs_2O was used to sub-domain the Caesium Zone MRE, contained entirely within CV13, with a MRE of 1.84 Mt at 4.40% Cs_2O (Indicated), and 0.98 Mt at 3.00% Cs_2O (Inferred), reported at a 0.50% Cs_2O cut-off. The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

Significant amount of MRE is Indicated

- Total MRE is 77% Indicated / 23% Inferred
- Total CV5 is 88% Indicated / 12% Inferred
- Total CV13 is 38% Indicated / 62% Inferred
- Total Cs MRE is 65% Indicated / 35% Inferred
- MRE contains no Measured resources.

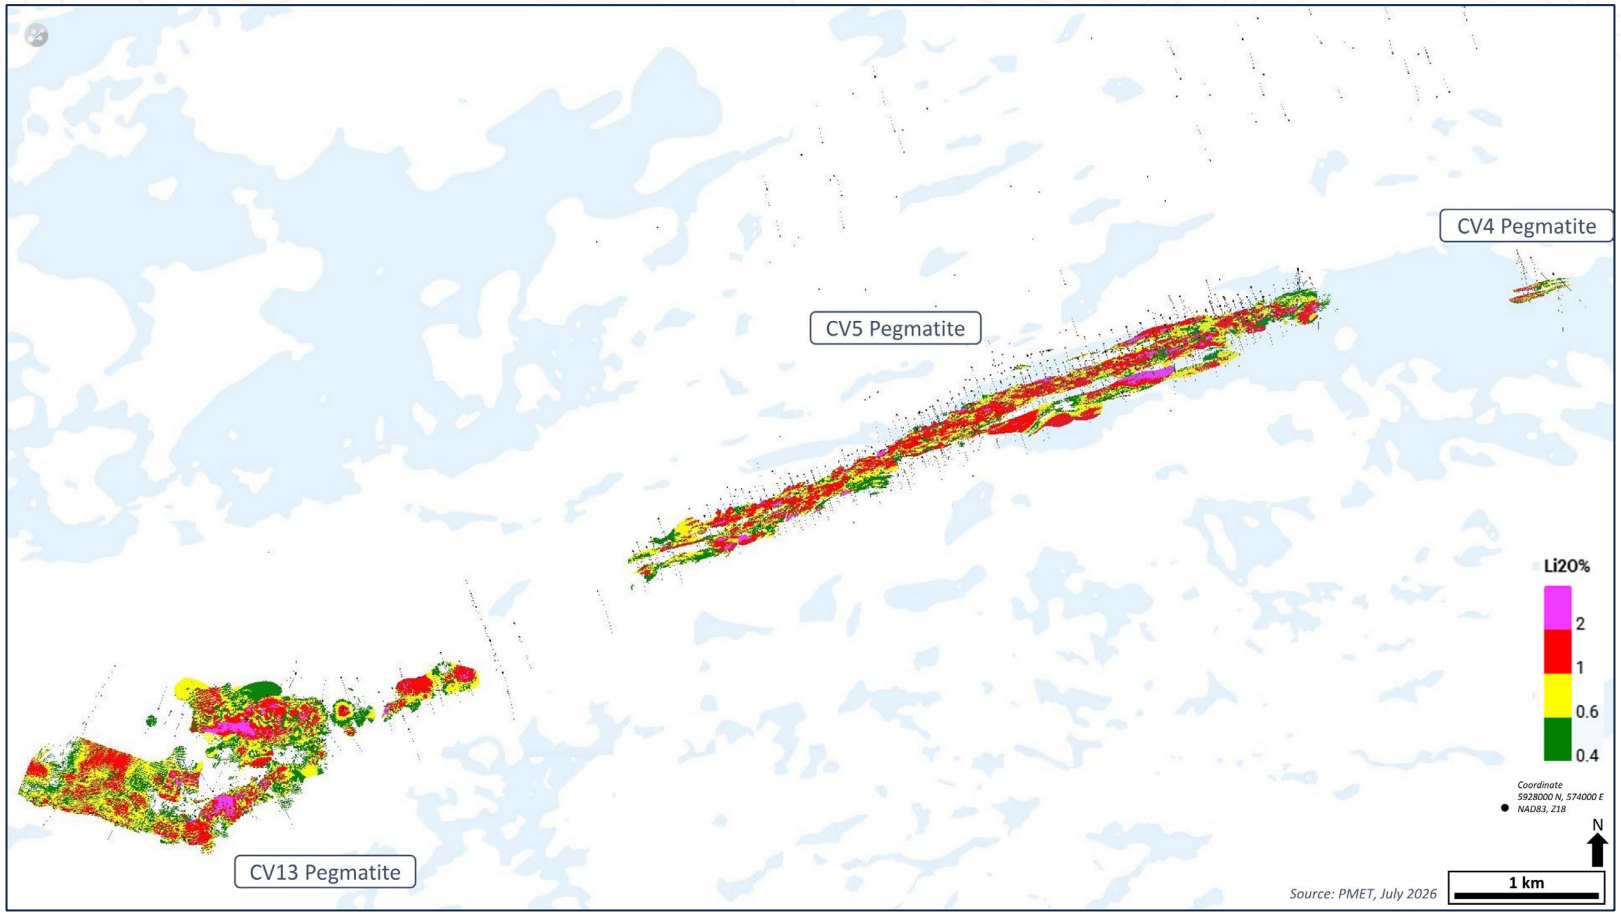

1. Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). A grade constraint of 0.50% Cs_2O was used to sub-domain the Caesium Zone MRE, contained entirely within CV13, with a MRE of 1.84 Mt at 4.40% Cs_2O (Indicated), and 0.98 Mt at 3.00% Cs_2O (Inferred), reported at a 0.50% Cs_2O cut-off. The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

CV5, CV13, and CV4 Pegmatite Block Models

- MRE is the fifth for the Project (MRE-5) to date.
- Includes the CV5, CV13, & CV4 pegmatites only, as well as the Caesium Zone MRE (entirely within CV13).
- The CV5, CV13, and CV4 pegmatites have strike lengths of 5.0 km, 3.2 km, and 0.3 km, respectively, and all remain open in multiple directions.
- Caesium Zone MRE includes Rigel, Vega, and newly estimated Helios Zone.
- Includes maiden rubidium resources in the Caesium Zone MRE only.
- Approximately 61% of the Consolidated MRE[1] tonnage is contained within a single dyke at CV5 (87.4 Mt at 1.44% Li_2O, Indicated)

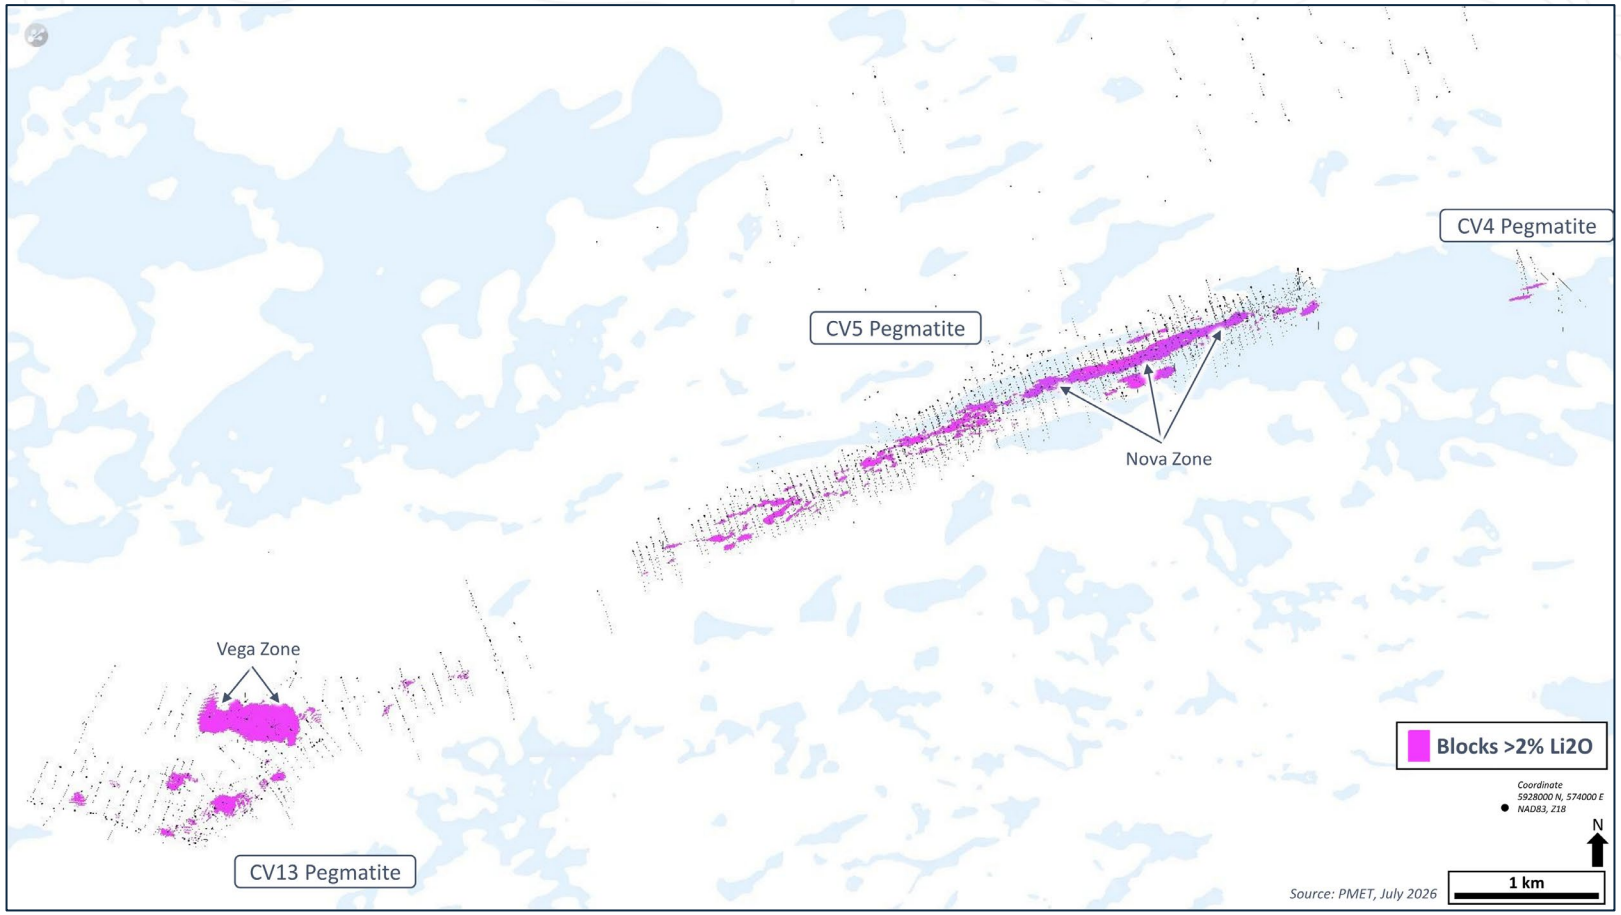

1. Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). A grade constraint of 0.50% Cs_2O was used to sub-domain the Caesium Zone MRE, contained entirely within CV13, with a MRE of 1.84 Mt at 4.40% Cs_2O (Indicated), and 0.98 Mt at 3.00% Cs_2O (Inferred), reported at a 0.50% Cs_2O cut-off. The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

High-Grade (Lithium) NOVA and VEGA Zones

- High-grade **Nova** and **Vega** Zones are readily evident when blocks are filtered to present only those >2% Li_2O
- Nova Zone footprint is ~1.5 km in strike length with a near vertical orientation.
- Vega Zone footprint is ~800 m x 250 with a near flat-lying orientation.
- At a 1.5% Li_2O COG, significant tonnage, primarily reflecting the Nova (CV5) and Vega (CV13) Zones is outlined, respectively[1]:
  - 36.5 Mt at 2.04% Li_2O (Indicated)
    4.1 Mt at 2.01% Li_2O (Inferred)
  - 5.9 Mt at 2.77% Li_2O (Indicated)
    4.2 Mt at 2.24% Li_2O (Inferred)

1. Nova and Vega Zones are high-grade sub-components of the Consolidated MRE. The Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

Caesium Zone MRE

- Caesium Zone MRE is hosted entirely within the CV13 Pegmatite, and includes the Rigel, Vega, and newly estimated Helios Zone.
- MRE includes maiden rubidium resources in the Caesium Zone MRE only.
- Vega has greatest potential for additional growth with the Rigel and Helios zones more constrained.

Caesium Zone	Classification	Tonnes (t)	Cs_2O (%)	Rb_2O (ppm)	Contained Cs_2O (t)
Rigel	Indicated	144,000	7.34	0.80	10,600
	Inferred	-	-	-	-
Vega	Indicated	1,633,000	4.19	0.43	68,400
	Inferred	978,000	2.96	0.37	29,000
Helios	Indicated	67,000	3.35	0.36	2,200
	Inferred	3,000	15.16	0.39	500
Rigel + Vega + Helios	**Indicated**	**1,844,000**	**4.40**	**0.46**	**81,200**
	Inferred	**981,000**	**3.00**	**0.37**	**29,400**

Pollucite with late-stage lepidolite (purple) and spodumene/pollucite (white) veining displaying classic "tapioca" texture (white blebs) at a depth of ~126 m in CV25-948 from the Vega Zone

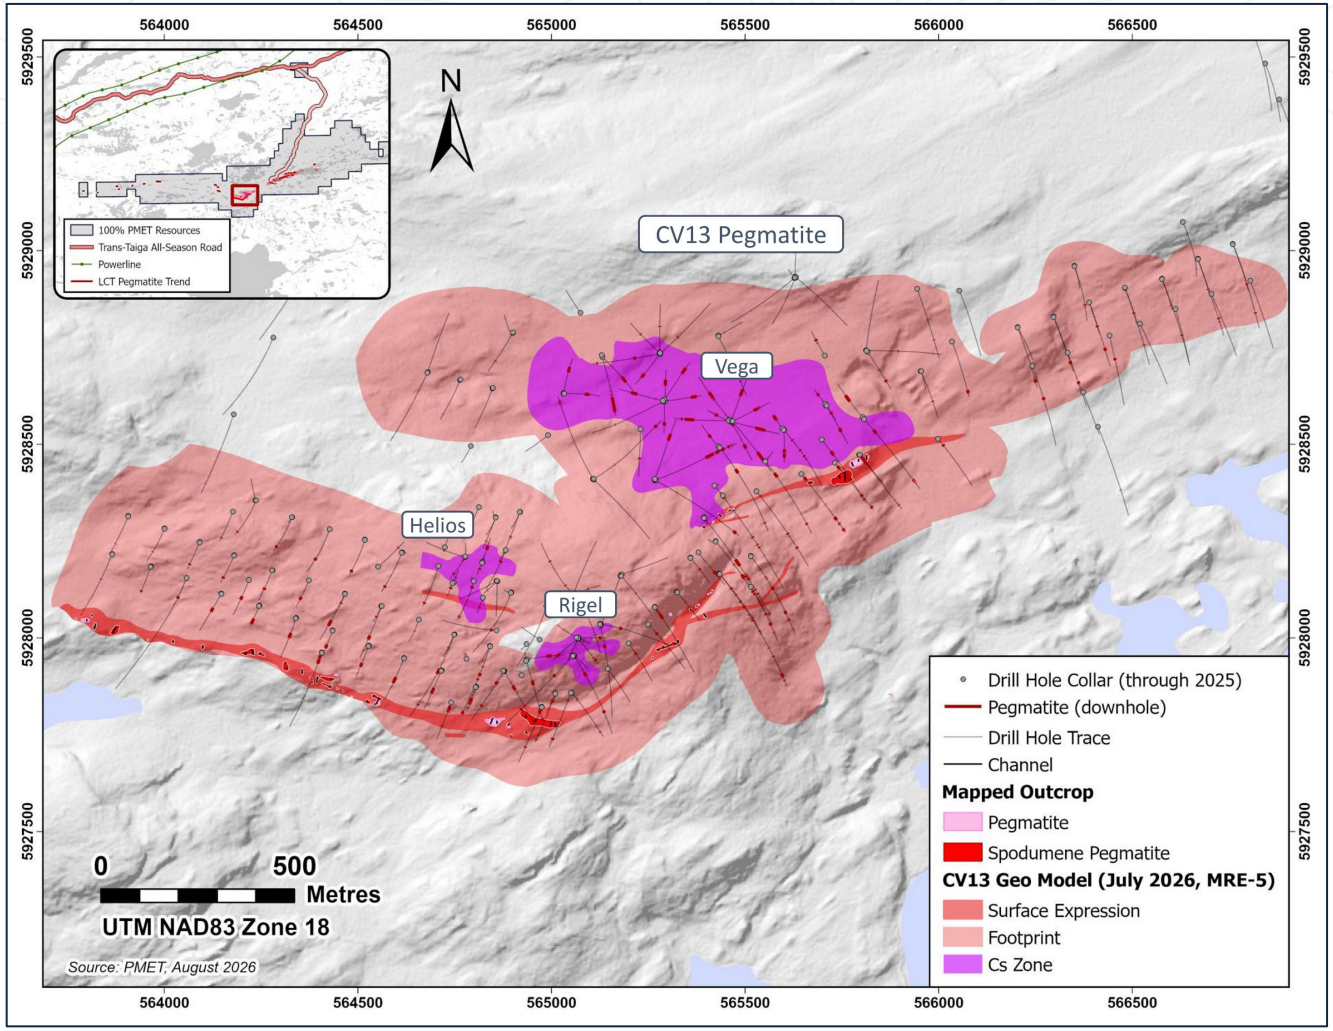

1. Consolidated MRE (CV5, CV13, and CV4 pegmatites) totals 113.9 Mt at 1.43% Li_2O and 164 ppm Ta_2O_5 (Indicated), and 33.8 Mt at 1.24% Li_2O and 150 ppm Ta_2O_5 (Inferred), at a Li_2O cut-off grade of 0.40% (open-pit), 0.60% (underground CV5 & CV4), and 0.70% (underground CV13). A grade constraint of 0.50% Cs_2O was used to sub-domain the Caesium Zone MRE, contained entirely within CV13, with a MRE of 1.84 Mt at 4.40% Cs_2O (Indicated), and 0.98 Mt at 3.00% Cs_2O (Inferred), reported at a 0.50% Cs_2O cut-off. The Effective Date is July 10, 2026. Mineral Resources are not Mineral Reserves as they do not have demonstrated economic viability. Mineral Resources are inclusive of Mineral Reserves.

NI 43-101 Mineral Resource Statement (MRE-5)

Caesium Zone Geological Models within the CV13 Pegmatite

- Cs zones are entirely nested within the CV13 Pegmatite and sub-domained using a 0.50% Cs_2O COG[1], and reported at a 0.50% Cs_2O COG
- **Vega** has been traced over a general area of at least 800 m x 250 m and consists of multiple, sub-parallel, flat-lying lenses, at a depth of ~110 m, with a true thickness ranging from <2 m to ~10 m.
- **Rigel** has been traced over a general area of at least 200 m x 100 m and consists of a single, shallow-dipping lens at a depth of ~50 m and true thickness ranging from <2 m to ~6 m.
- **Helios** has been traced over an area of ~180 m x 80 m and consists of two, near-horizontal, lenses at a depth of ~30 m and true thickness ranging from ~1m to 3 m.

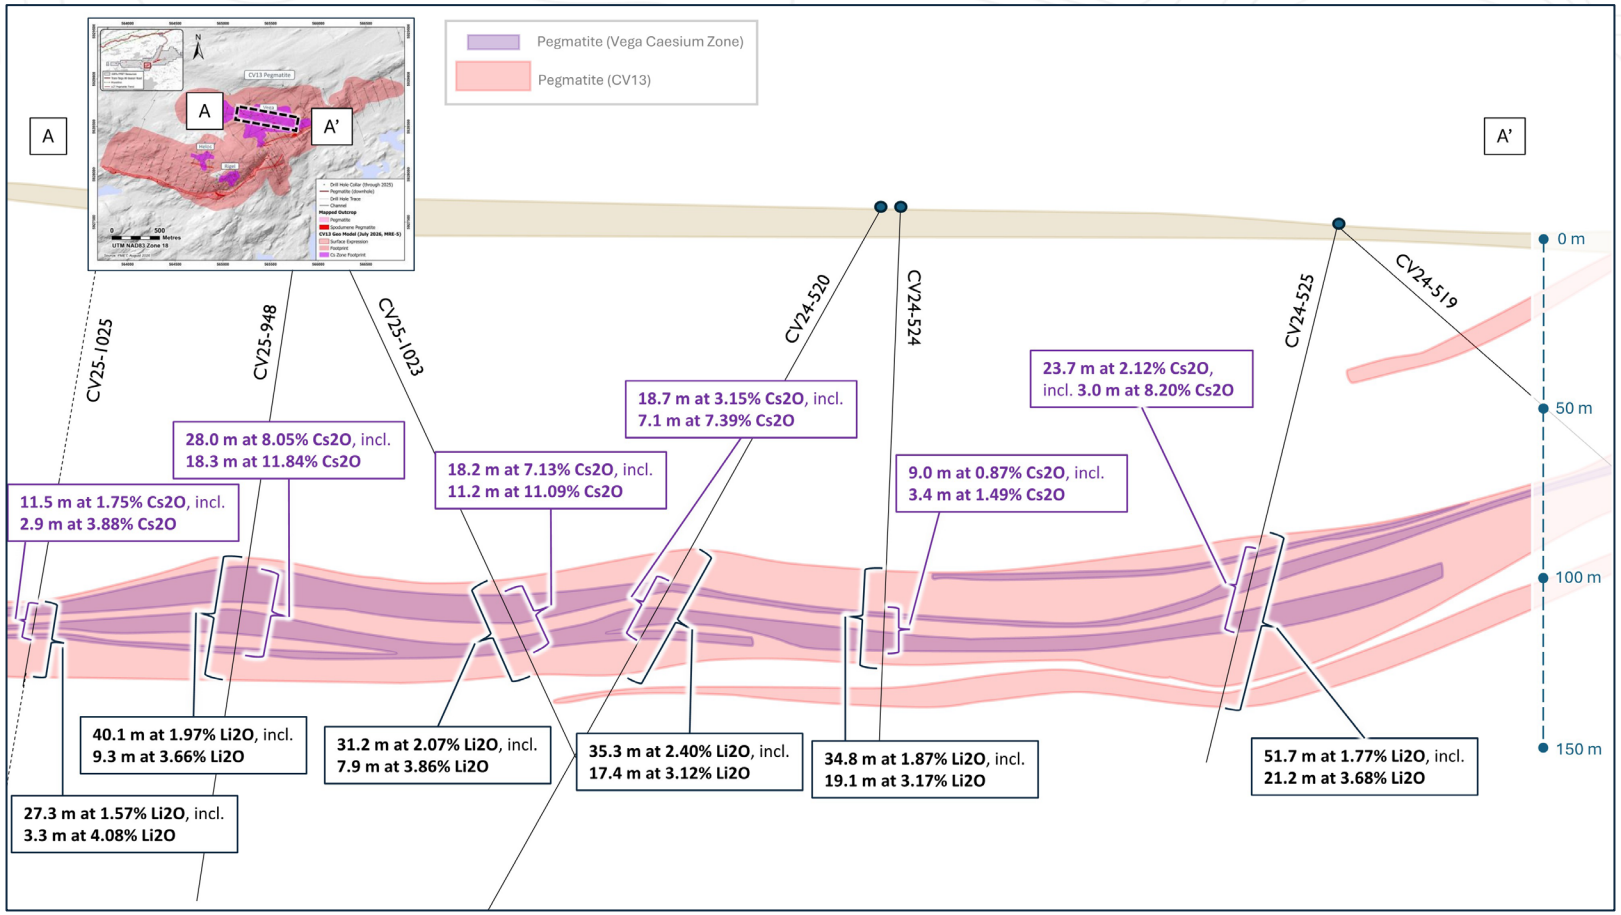

1. *Cut-off grade*

NI 43-101 Mineral Resource Statement (MRE-5)

Vega Li-Cs-Ta Zone within the CV13 Pegmatite

- Cs zones are entirely nested within the CV13 Pegmatite and sub-domained using a 0.50% Cs_2O grade constraint, and reported at a 0.50% Cs_2O COG[1]
- **Vega** has been traced over a general area of at least 800 m x 250 m and consists of multiple, sub-parallel, flat-lying lenses, at a depth of ~110 m, with a true thickness ranging from <2 m to ~10 m.
- At Vega, Cs zones present as relatively flat-lying lenses (Li-Cs-Ta) within a wider, well-mineralized pegmatite dyke (Li-Ta) at CV13.

1. Cut-off grade

Important Information

This presentation (together with oral statements made in connection herewith, this "Presentation") is dated November 10, 2026 and has been prepared by PMET Resources Inc. (the "Company") and is authorised for release by its CEO. President and Managing Director, Ken Brinsden. This Presentation and the information contained herein is for information purposes only, and all recipients agree that they will use this Presentation solely for information purposes.

SUMMARY INFORMATION

This Presentation contains summary information about the current activities of the Company and its subsidiaries (the "Group") which is current as at the date of this Presentation unless otherwise indicated. The information in this Presentation is of a general nature and does not purport to be complete or exhaustive. This Presentation should be read in conjunction with the Company's news release dated November 10, 2026 announcing the results of the Updated CV5 Lithium-Tantalum Feasibility Study (the "Updated FS") and the Company's other periodic and continuous disclosure releases, available on SEDAR+ or the ASX, including the detailed risk discussion in the Company's most recent Annual Information Form filed on SEDAR+ and with the ASX.

Certain market and industry data used in this Presentation may have been obtained from research, surveys or studies conducted by third parties, including industry or general publications. None of the Group nor its advisers or representatives have independently verified any such market or industry data provided by third parties or industry or general publications.

No member of the Group gives any representations or warranties, express or implied, in relation to the statements or information in this Presentation.

Readers should not construe the contents of this Presentation as legal, tax, regulatory, financial or accounting advice and are urged to consult with their own advisers in relation to such matters, including as needed to make a future investment decision and determine whether you are legally permitted to make an investment under applicable legal requirements, including securities or similar laws or regulations.

NO FINANCIAL PRODUCT ADVICE

This Presentation is for information purposes only and is not a prospectus, offering memorandum, disclosure document, product disclosure statement or other offering document under Canadian law, Australian law or the law of any other jurisdiction. This Presentation is not financial product advice or investment advice nor a recommendation to acquire and should not be construed to constitute an offer to sell or the solicitation of an offer to buy, any securities. This Presentation shall not form the basis for or be used for any such offer or solicitation or other contract or engagement in any jurisdiction. An investment in Company securities is subject to known and unknown risks, some of which are beyond the control of the Group. Each recipient should undertake its own independent evaluation of the Group and conduct its own inquiries as to the adequacy, accuracy and completeness of the information contained herein.

CURRENCY

Unless otherwise indicated, all references to "$", "C$" or "CA$" in this Presentation are to Canadian dollars and references to "US$" are to US dollars. A foreign exchange conversion rate of 1.37 CA$/US$ has been used over the life of mine ("LOM") in the Updated FS.

ROUNDING

Certain figures, percentages, estimates, calculations of value and fractions provided in this Presentation are subject to the effect of rounding. Accordingly, the actual calculation of these figures may differ from the figures set out in this Presentation.

DISCLAIMER AND FORWARD-LOOKING STATEMENTS

This Presentation contains "forward-looking information" or "forward-looking statements" within the meaning of applicable securities laws.

All statements, other than statements of present or historical facts, are forward-looking statements. Forward-looking statements involve known and unknown risks, uncertainties and assumptions and accordingly, actual results could differ materially from those expressed or implied in such statements. You are hence cautioned not to place undue reliance on forward-looking statements. Forward-looking statements are typically identified by words such as "plan", "development", "growth", "continued", "intentions", "expectations", "strategy", "opportunities", "anticipated", "trends", "potential", "outlook", "ability", "additional", "on track", "prospects", "viability", "estimated", "reaches", "enhancing", "strengthen", "target", "will", "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved.

Forward-looking statements in this Presentation include, but are not limited to, statements concerning: the results of the Updated FS, including, without limitation, the estimation of Mineral Reserves and Mineral Resources, the Shaakichiuwaanaan Project (the "Project") economics, and financial and operational parameters such as expected throughput, production, processing methods, cash costs, all-in sustaining costs, other costs, capital expenditures, the capital intensity, the alternative price, foreign exchange and tantalum scenarios presented herein, NPV, IRR, payback period and life of mine, upside potential, opportunities for growth and expected next steps in the development of the Project, including detailed engineering and optimisation and timing for potential commencement of construction and first production of concentrate, the economic potential of the Project, including its potential resilience to lower market cycles, the upcoming ESIA, including the proposed permitting and development timeline, the expected incorporation of the Updated FS changes into the ESIA process and the authorisation timeline, the opportunities for additional conversion at CV5, CV13 and CV4, exploration potential and Mineral Resource growth, the anticipated production rate, the phased development plan, including the timing and scope of the Phase 2 Expansion, the expected improvements relative to the 2025 FS, the potential for the Project to become a cornerstone supplier to North American, European, and/or Asian battery supply chains, the timing of the FID, which remains subject to securing Project approvals and financing, the eligibility for tax credits and other government support programs, including the anticipated pre-production credits, the CTM-ITC, the TCRR, the Québec tax holiday and the proposed federal Productivity Mega Deduction, the anticipated filing of a technical report in respect of the Updated FS, the anticipated timing, scope and results of the PEA, anticipated tantalum production, recoveries and product specifications, long-term spodumene and tantalum price assumptions, the Company's financing strategy, including the letters of interest received and the Volkswagen/PowerCo partnership, the PowerCo offtake and the satisfaction of its conditions, the bulk sample program and its timing, power supply arrangements with Hydro-Québec, the Company's potential ranking as a spodumene or tantalum producer, the timing of commissioning and potential plant modularisation, continued engagement with the Cree Nation of Chisasibi and the Cree Nation Government, the availability of uncommitted production for future offtake, potential regional infrastructure and transportation improvements, the future demand and prices for lithium, tantalum, caesium and electric batteries generally, markets' dynamics, upcoming catalysts, the ability to develop midstream and downstream processing, including on-site lithium conversion, the potential and results of electric microwave calcination, the evaluation of downstream processing opportunities and strategic partnerships, the future uses of tantalum and caesium, and the potential to extract additional value from caesium and tantalum co-products.

Important Information

Although the Company believes its expectations are based upon reasonable assumptions and has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information.

Key assumptions upon which the Company's forward-looking information is based include without limitation, the key assumptions, parameters and methods used to estimate the Mineral Reserves and Mineral Resources and to prepare the Updated FS; the capital and operating cost estimates and the metallurgical recovery assumptions; the long-term spodumene and tantalum price assumptions and foreign exchange rate used in the Updated FS, and the alternative price and foreign exchange assumptions used in the scenarios presented herein; the availability of the tax credits and the Québec tax holiday; that the Company will obtain the required authorisations within the anticipated timelines; that an agreement will be concluded with the Cree Nation Government and the Cree Nation of Chisasibi; that power will be available from Hydro-Québec on the anticipated terms and timeline; that FID, construction and ramp-up will proceed on the anticipated schedule; that the PEA and the technical report will be completed on the anticipated scope and timeline; that approval of the bulk sample program will be received as anticipated; that the Company will obtain the financing required to develop the Project on acceptable terms; the ability to source services, equipment, materials and personnel on commercially viable terms; assumptions regarding development and exploration activities; the timing, extent, duration and economic viability of such operations, including any mineral resources or reserves identified thereby; the ability to achieve production and the timing thereof; the availability and cost of inputs; the price and market for outputs; foreign exchange rates; taxation levels; the timely receipt of necessary approvals or permits; the ability to meet current and future obligations; the current and future social, economic and political conditions; that the conditions of the PowerCo offtake will be satisfied; the accuracy of market, industry and peer data obtained from third parties; and other assumptions and factors generally associated with the mining industry. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which may have been used.

Forward-looking statements are also subject to risks and uncertainties facing the Company's business, any of which could have a material adverse effect on the Company's business, financial condition, results of operations and growth prospects. Some of the risks the Company faces and the uncertainties that could cause actual results to differ materially from those expressed in the forward-looking statements include, among others, requirements for additional capital; operating and technical difficulties in connection with mineral exploration and development activities; actual results of exploration activities, including on the Project; the estimation or realization of mineral reserves and mineral resources; the timing and results of estimated future production; the costs of production and capital expenditures, and the accuracy of capital and operating cost estimates, including inflation; the costs and timing of the development of new deposits; future prices of spodumene and tantalum, including the small and relatively opaque nature of the tantalum market and the risk that the Company may be unable to secure offtake for tantalite concentrate on the terms assumed or at all; the risk that the Company does not qualify for, or receive, the tax credits and government support assumed in the Updated FS; the risk that proposed tax measures are not enacted as proposed or at all; the risk that required authorisations are delayed or not obtained; the Company's ability to conclude an agreement with the Cree Nation Government and the Cree Nation of Chisasibi; access to power from Hydro-Québec; the availability and capacity of road, rail and port infrastructure; the risk that the conditions of the PowerCo offtake are not satisfied; the risk that the PEA is delayed, and the preliminary nature of any PEA results; the risk that the technical report differs from the information in this Presentation; delays in the bulk sample program; the risk that midstream or downstream processing, plant optimisation or regional infrastructure opportunities are not realised; forest fires, extreme weather and other natural events; the risk that comparisons with other projects or producers are not accurate or comparable; changes in general economic conditions; changes in the financial markets and in the demand and market price for commodities; lack of investor interest in future financings; the Company's ability to secure permits or financing for the completion of construction activities; and the Company's ability to execute on plans relating to the Project. In addition, readers should review the detailed risk discussion in the Company's most recent Annual Information Form filed on SEDAR+ for a fuller understanding of the risks and uncertainties that affect the Company's business and operations. These risks are not exhaustive; however, they should be considered carefully. If any of these risks or uncertainties materialize, actual results may vary materially from those anticipated in the forward-looking statements found herein.

Forward-looking statements contained herein are presented for the purpose of assisting investors in understanding the Company's business plans, financial performance and condition and may not be appropriate for other purposes.

The forward-looking statements contained herein are made only as of the date hereof. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except to the extent required by applicable law. The Company qualifies all of its forward-looking statements by these cautionary statements.

Important Information

NON-IFRS AND OTHER FINANCIAL MEASURES

This Presentation includes non-IFRS financial measures and non-IFRS financial ratios. The Company believes that these measures provide additional insight, but these measures are not standardized financial measures prescribed under IFRS and therefore should not be confused with, or used as an alternative for, performance measures calculated according to IFRS. Furthermore, these measures should not be compared with similarly titled measures provided or used by other issuers. The non-IFRS financial measures and non-IFRS financial ratios used in this Presentation and common to the mining industry are defined below:

- Spodumene cash operating costs at site and spodumene cash operating costs at site per tonne: spodumene cash operating costs at site is a non-IFRS financial measure which includes mining, processing and site administration costs over the LOM per unit of concentrate produced. Spodumene cash operating costs at site per tonne is a non-IFRS financial ratio which is calculated as spodumene cash operating costs at site divided by anticipated spodumene concentrate production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- Net cash operating costs at site and net cash operating costs at site per tonne: net cash operating costs at site is a non-IFRS financial measure which includes mining, processing and site administration costs, and tantalum credit, over the LOM per unit of concentrate produced. The composition of net cash operating costs at site has changed from that disclosed previously to reflect the inclusion of a tantalum by-product credit, because tantalum production is now expected to form part of the Company's operations. Net cash operating costs at site per tonne is a non-IFRS financial ratio which is calculated as net cash operating costs at site divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- Total cash operating costs (FOB Quebec ports) and total cash operating costs per tonne (FOB Quebec ports): Total cash operating costs (FOB Quebec ports) is a non-IFRS financial measure which includes mining, processing, site administration, and product transportation costs to a port in Quebec, and tantalum credit, but excludes royalties, over the LOM per unit of concentrate produced. The composition of LOM total cash operating costs has changed from that disclosed previously to reflect the inclusion of a tantalum by-product credit, because tantalum production is now expected to form part of the Company's operations. Total cash operating costs (FOB Quebec ports) per tonne is a non-IFRS financial ratio which is calculated as total cash operating costs (FOB Quebec ports) divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.
- All-in sustaining cost ("AISC") (FOB Quebec ports) and AISC per tonne (FOB Quebec ports): LOM AISC (FOB Quebec ports) is a non-IFRS financial measure which includes mining, processing, site administration, and product transportation costs to a port in Quebec, and tantalum credit and sustaining capital, but excludes royalties, over the per unit of concentrate produced. The composition of AISC (FOB Quebec ports) has changed from that disclosed previously in the 2025 CV5 Lithium-Only Feasibility Study to reflect the inclusion of a tantalum by-product credit, because tantalum production is now expected to form part of the Company's operations and the related credit is expected to offset operating costs. AISC (FOB Quebec ports) per tonne of spodumene concentrate is a non-IFRS financial ratio which is calculated as AISC (FOB Quebec ports) divided by anticipated production expressed in tonnes. These measures capture the important components of the Company's anticipated production and related costs and are used to indicate anticipated cost performance of the Company's operations.

The Company does not currently have operations and therefore does not have historical equivalent measures to compare and cannot therefore reconcile with historical measures.

Important Information

NI 43-101 AND JORC CODE (2012 EDITION)
Mineral Reserve and Mineral Resource estimates and Exploration Results are reported in accordance with Canadian National Instrument 43-101 - Standards of Disclosure for Mineral Projects (NI 43-101) and the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code (2012 Edition)).

Readers outside of Australia and Canada should note that they may not comply with the relevant guidelines in other countries and, in particular, may not comply with Item 1300 of Regulation S-K, which governs disclosures in registration statements filed with the SEC. NI 43-101 differs significantly from the disclosure requirements of the SEC generally applicable to US companies, and therefore information contained in this Presentation describing mineral deposits, resources and reserves is not comparable to similar information made public by companies subject to the reporting and disclosure requirements of US securities laws.

QUALIFIED PERSONS (QP) / COMPETENT PERSONS (CP)
Mr. Darren L. Smith, M.Sc., P.Geo., who is a Qualified Person as defined by National Instrument 43-101, and Competent Person as defined by the JORC Code 2012, and member in good standing with the Ordre des Géologues du Québec (Geologist Permit number 1968), and with the Association of Professional Engineers and Geoscientists of Alberta (member number 87868), has reviewed and approved, or has prepared, as applicable, the disclosure of the exploration results and Mineral Resource technical information contained in this Presentation and has confirmed that the relevant information is an accurate representation of the available data and studies for the Shaakichiuwaanaan Project.

Mr. Smith is an Executive and Vice President of Exploration for PMET Resources Inc. and holds common shares, options, Restricted Share Units (RSUs), and Performance Share Units (PSUs) in the Company.

Mr. Frédéric Mercier-Langevin, Ing. M.Sc, who is a Qualified Person as defined by National Instrument 43-101, and Competent Person as defined by the JORC Code 2012, and member in good standing of Ordre des Ingénieurs du Québec (OIQ), has reviewed and approved, or has prepared, as applicable, the disclosure of the scientific and technical information contained in this Presentation and has confirmed that the relevant information is an accurate representation of the available data and studies for the Shaakichiuwaanaan Project.

Mr. Mercier-Langevin is the Chief Operating and Development Officer for PMET Resources Inc. and holds common shares, options, RSUs, and PSUs in the Company.

ASX COMPETENT PERSON STATEMENTS – SHAAKICHIUWAANAAN PROJECT
THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE UPDATED CV5 LITHIUM-TANTALUM FEASIBILITY STUDY (FS) was first released by the Company in its news release dated November 10, 2026 (Montréal time), titled "PMET Resources Delivers Enhanced CV5 Lithium-Tantalum Feasibility Study". The Company confirms that all material assumptions underpinning the production target and forecast financial information derived from the production target in the FS news release continue to apply and have not materially changed.

THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE CV5 PEGMATITE MINERAL RESERVE ESTIMATE was reported by the Company in accordance with ASX Listing Rule 5.9 on November 10, 2026. The Company confirms it is not aware of any new information or data that materially affects the information included in the announcement and that all material assumptions and technical parameters underpinning the estimate in the announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcement.

THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO THE CONSOLIDATED MINERAL RESOURCE ESTIMATE was reported by the Company in accordance with ASX Listing Rule 5.8 on November 3, 2026. The Company confirms it is not aware of any new information or data that materially affects the information included in the announcements and that all material assumptions and technical parameters underpinning the estimates in the announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcements.

THE INFORMATION IN THIS PRESENTATION WITH RESPECT TO EXPLORATION RESULTS was reported by the Company in accordance with ASX Listing Rule 5.7 on June 25, 2025, September 24, 2025, December 15, 2025 and February 19, 2026. The Company confirms it is not aware of any new information or data that materially affects the information included in the announcement. The Company confirms that the form and context in which the competent person's findings are presented have not been materially modified from the original market announcement.
